

KREATIV DENTAL®

AGENT TRAINING MANUAL

Budapest, Hungary

International patient care • Training guide

Kreativ Dental Clinic

1141 Budapest, Vezér utca 100, Hungary

Phone: +36 1 222 01 99

US Primary Kreativ Dental Agents:

Bronwyn and Craig Jones

CANADA Primary Dental Agent:

Megan Allard

Budapest, Hungary, Europe's leading destination for high-quality dental treatment and dental tourism.

FOR AGENTS ONLY

IMPORTANT: This guide is ONLY for agents and should not be shared with prospective patients. It is designed to educate and help agents answer the most common questions asked by prospective patients considering treatment at Kreativ Dental in Budapest.

Agents should use information provided as a guide only.

Agents should never guess or provide clinical advice beyond their knowledge. When in doubt, seek clarification through the National Agents from the clinic's dental professionals.

AGENT GOLDEN RULE

It is always better to say "I don't know, but I will find out for you" or "I will confirm that for you" than to provide inaccurate information.

Patients trust Kreativ Dental for its professionalism, honesty, and integrity.

INDEX

- 1: Why do so many American patients choose Kreativ Dental**
- 2: Is Budapest Safe**
- 3: Example of cost difference from the U.S. to Budapest**
- 4: Why is Dental care so expensive compared to the U.S. and Canada**
- 5: How much can I save having treatment in Budapest at Kreativ**
- 6: Is the quality of care comparable to the U.S. and Canada**
- 7: Patient treatment questions and scheduling**
- 8: Treatment scenarios and time required at Clinic**
- 9: Can I receive a treatment plan before traveling to Hungary**
- 10: Can you tell me exactly what treatment I need from my x-rays**
- 11: How accurate is a treatment plan using x-rays**
- 12: Can I have an implant at the same time as my extraction**
- 13: What does 5 working days mean, can I leave early**
- 14: How many days will I need to be in Budapest for crowns**
- 15: Do you do “all-on-4's”**
- 16: Some sample time frames for different procedures**
- 17: How is my pain/anxiety managed**
- 18: Can I have a root canal and a crown at the same time**
- 19: Travel, Accommodation and Support**
- 20: Why is it important to inform Main Agents of patient travel plans as soon as possible**
- 21: I only want one dental trip to Budapest is this possible**

- 22: Will I have a dental appointment every day**
- 23: What day should I plan to arrive in Budapest to start my Treatment**
- 24: What are crowns made from**
- 25: Dental implants**
- 26: What implant brands does Kreativ Dental use**
- 27: What is the difference between implant brands**
- 28: What is a sinus lift and why is it necessary?**
- 29: Wisdom teeth removal**

69: Dental Hygienic Treatment

Tooth Whitening home Kit

Zoom! Tooth Whitening Upper and Lower

70: Dental Tax Deduction (America)

71: Dental Finance

72: How do Clients Pay at Clinic

73: Dental Awards

1:

Q: Why do so many American patients choose Kreativ Dental for their dental tourism?

A: Patients choose Kreativ Dental because of its highly qualified dentists, modern facilities, advanced technology, excellent patient care, and significant savings compared with treatment costs in the United States and Canada.

Hungary is also the undisputed dental capital of Europe. Dentists in Hungary are required to meet strict European Union educational standards. Kreativ is highly recommended for complex implantology and prosthetics.

2:

Q: Is Budapest safe?

A. Hungary is the *17th safest country in the world* according to the global peace index. Safety rankings of other Dental Tourism countries according to the <https://www.economicsandpeace.org/wp-content/uploads/2026/06/Global-Peace-Index-2026-Report.pdf>

- Hungary - 17th safest
- Mexico - 135th safest
- Turkey - 146th safest
- U.S.A. and Canada are not dental tourism destinations, but the U.S. is ranked 125th and Canada is ranked 14th

- You can drink the water out of the tap safely, this is not true for Mexico, Turkey, Costa Rica and Thailand. Even if a patient chose a good clinic in one of these destinations, their safety outside is far poorer.

3:

Q. First things first. MONEY: What are some examples of prices at Kreativ Dental compared to the USA?

The following chart outlines average price differences between standard US dental networks and Kreativ Dental's published fees. It is always FULL TRANSPARENCY at Kreativ Dental.

Even after airfare and hotel costs, many Americans save 50–75% on major restorative dental work in Budapest."

Procedure	Connecticut	Missouri	New York City	Budapest
Premium Implant (<i>implant only</i>)	\$3,000–\$5,000	\$2,500–\$4,500	\$4,000–\$7,000	\$900–\$1,800
Zirconia Crown (<i>per tooth</i>)	\$1,400–\$2,200	\$1,100–\$1,800	\$1,800–\$3,000	\$450–\$800
Porcelain Veneer (<i>e.max</i>)	\$1,500–\$2,500	\$1,200–\$2,000	\$2,000–\$4,000	\$350–\$700
Root Canal Therapy	\$1,000–\$2,000	\$800–\$1,500	\$1,500–\$3,000	\$189–\$500
Complete Denture (<i>upper or lower</i>)	\$2,000–\$5,000	\$1,500–\$4,000	\$3,000–\$8,000	\$500–\$1,500
Composite White Filling	\$250–\$500	\$175–\$400	\$350–\$800	\$94–\$121

TOTAL IMPLANT COST: USA vs. Budapest Dental Fee Comparison (2026 Estimates) Complete Premium Implant Cost
(Implant + Abutment + Zirconia Crown)

Location	Typical Cost Per Finished Tooth
Connecticut	\$5,000–\$8,000
Missouri	\$4,000–\$7,000
New York City	\$6,500–\$12,000+
Budapest	\$1,800–\$3,000

REAL LIFE EXAMPLE: June 2026 (Check Current Prices do not use these figures)

4 IMPLANTS, 5 CROWNS,

US DENTIST: \$43,353

KREATIV DENTAL: \$14,000

4: Q: Why is dental care so expensive in the US and Canada?

here are three reasons, none of which are related to the quality of care. As a result of the huge shortage of Dentists, they can charge far higher prices

Supply and Demand – Coupled to the huge shortage of dentists in the US. Dentists in America are aging out of the profession because of this alone. Dental Tourism is predicted to increase by 20% per year for the next ten years. (good news for us to see the chart below!)

Cost of Dental education in the US: The total estimated cost – factoring in room, board, and supplies – typically ranges from \$230,000 to over \$400,000. The average debt at the end of their studies for a new dentist is \$330,000 this often result in the new dentist having to work for a dental corporation who will make these payments as part of their employment, this environment results in high costs to the client, but it also gives us a great advantage when discussing the benefits of going to Hungary for dental care.

Niche Specialists in the US and Canada - The dental process can be slow in Canada and the U.S. As a result of having to go to several specialists to complete your dental treatment with appointments being spread over a longer period. This process increases costs as well. Kreativ is all under one roof and ownership and therefore is multi-collaborative. Each of these U S and Canadian specialists have their own separate business expenses, staff, and scheduling etc.

- Endodontics: eg root canals
- Orthodontics: braces, aligners, bad bites
- Periodontics: Gum disease, Implants
- Oral and Maxillofacial Surgery: The most medical-adjacent specialty. Surgical procedures - extractions, corrective jaw surgery, and facial reconstruction.
- Prosthodontics: Dentures, crowns, and specialized bridges.

5:

Q. How much can I save by having treatment in Hungary?

A: Savings vary depending on the treatment required. Many patients save 70%

B. After factoring in travel from the US and Canada, hotel and meals, the savings is generally more than 50% (and you get a European holiday as well, dental work, is usually between 1-3 hours per day, and not every day)

6:

Q: Is the quality of treatment comparable to what I would receive at home?

- **DEFINITELY YES.** Kreativ Dental has treated thousands of international patients and maintains high clinical standards using modern equipment and internationally recognized treatment protocols. (Go to the index to see more details about certifications.)
 - Kreativ Dental has been certified to the ISO 9001:2015 standard for its quality management system.
 - The certification covers dental treatment, dental laboratory services, and X-ray diagnostics.
 - The certification was issued by Lloyd's Register for Quality Assurance (LRQA), a globally recognized certification body.

For prospective patients, highlight:

- ISO 9001:2015 Certification (LRQA).
- Treatment Abroad Code of Practice Accreditation.
- Membership in the Hungarian Dental Association.
- The clinic's in-house laboratory and specialist team structure.
- Kreativ dental has been internationally voted the number Dental Clinic in Europe repeatably and has been a pioneer in Dental Tourism since 1999. We also offer one of the best guarantees in the industry (read the guarantee it's on the web page)

These are the credentials most likely to resonate with international patients evaluating dental tourism.

7:

PATIENT TREATMENT QUESTIONS & SCHEDULING

Q. WHAT CAN I DO AHEAD OF TIME?

Q. HOW CAN I GET THE MOST ACCURATE ESTIMATE OF MY NEEDED WORK?

Q. WHAT INFORMATION DO I NEED TO SEND TO GET A PRELIMINARY ASSESSMENT?

- **Send X-rays, CBCT Scan and any supporting documentation such as a treatment plan from a local dentist. This information needs to be sent to the main agents. They will forward it to the clinic for evaluation. Once it returns, we will send it back to you and if needed, assist you with your response. Let us know if you need technical support send any of these materials BELOW:**
- **Clear photographs of your SMILE.....**
 - Your dental history, briefly
 - Information about any pain, missing teeth, or concerns
- **Essential X-Rays**
- **OPG (Panoramic Radiograph):** This is the single most important image. It captures your entire upper and lower jaws, sinuses, and tooth roots in one 2D image.
- **3D Dental CT scan (CBCT):** If you are seeking dental implants, full-mouth restorations, or complex bone grafting, ask for a copy of your 3D CT scan.
- **Provide Supporting Documentation from Your US Dentist (if possible)**
- **Periodontal Chart:** This documents the depth of your gum pockets. It is crucial to determine whether you have gum disease that requires treatment before undergoing cosmetic or implant work.
- **Clinical Notes & Treatment History:** A written overview of recent procedures, especially regarding root canals, crowns, or extractions, and any specific materials used.
- **Recent Dentist/Specialist Diagnosis:** If a US dentist recently proposed a treatment plan (e.g., "needs 3 implants and 4 crowns"), include their written treatment plan and diagnosis, so Kreativ knows exactly what your dentist was targeting.

Ask your US dentist for an export of your DICOM files (typically used for CT scans) and high-resolution JPEGs or PDFs for your X-rays and charts. They can securely share these via email, cloud storage, or place them on a USB flash drive for you to mail us or the clinic (decision will be made as per the circumstances) or securely upload. Send to tousa@kreativdentalclinic.eu

8:

TREATMENT SCENARIOS & TIME REQUIRED AT CLINIC

NOTE: *Every patient is different. Any treatment plan prepared before your visit is provisional and based solely on the information available at the time. The final treatment plan, timeline, and costs may change after clinical assessment and diagnostic imaging.*

Thus, provide as much information and x-rays as you can from your client prior to their visit. You will help Budapest better estimate treatments and the time required.

ALSO, it is strongly recommended that patients arrive the day before and do not make travel arrangements that require them to leave Budapest immediately after their scheduled treatment period. Encouraging flexibility in travel plans is always advisable. Alternatively, purchase a flexible return ticket.

USA

9:

Q: Can I receive a treatment plan before traveling to Hungary?

A: Sometimes, YES. Patients may submit recent panoramic X-rays, CT scans, photographs, and dental records for review. This information is often enough for the clinic to provide a theoretical plan.

However, any treatment plan prepared prior to an in-person consultation is purely theoretical and based solely on the information provided. Because there are often unknown factors and clinical variables that cannot be identified without a physical examination, the proposed treatment plan, procedures, timeline, and costs may change.

All treatment recommendations remain subject to confirmation, modification, or revision following a comprehensive in-person examination and diagnostic assessment by the treating dentist.

Many times, you are able to do this for the client without the need to involve the clinic. Many times, the client will ask you for the cost and time required of several procedures; you can prepare a provisional treatment plan with this information. We will help you with this to begin with. We are always available to answer your questions. **Theoretical plans should be requested only as a last resort. The whole point of employing a team of agents is that the clinic doesn't need to provide prices, plans and breakdowns. This is one of our purposes as agents!**

10:

Q: Can you tell me exactly what treatment I need from my X-rays?

A: No. While X-rays provide valuable information, an accurate diagnosis often requires a clinical examination. There are too many variables to provide a definitive diagnosis without seeing the patient in person.

11:

Q: How accurate is a treatment plan provided by X-rays?

A: Preliminary treatment plans are estimated based on the information available. Final treatment recommendations can only be confirmed after a full in person examination by the treating dentist at their consultation.

12:

Q. CAN I HAVE AN IMPLANT AT THE SAME TIME AS MY EXTRACTION?

- **Sometimes.** In some cases, it is possible to place a dental implant at the same appointment as a tooth extraction. This is known as immediate implant placement.
- However, this depends on several clinical factors, including the condition of the tooth being removed, the quality and quantity of the surrounding bone, the presence of infection, and your overall oral health.
 - Unfortunately, it is not possible to determine with certainty whether immediate implant placement is suitable based solely on X-rays, photographs, or information provided by email.
 - A definitive decision can only be made at the time of the extraction by the dentist. This process is possible but unlikely and could not be assured prior to the extraction.
 - **Direct implant placement is not possible further back than the premolar region. Direct implant placement is only possible for the front teeth and even then, it's more an exception to the rule. (Do you know what a premolar is, your front teeth bite pieces off and as you go back from there, they become flatter to grind the food into small bits, this is progressive this is basic knowledge if you are not familiar look it up now)**

13:

Q. WHAT DOES FIVE WORKING DAYS MEAN, AND CAN I LEAVE EARLIER?

NOTE: *The dentist will discuss the individual treatment schedule during the consultation and will keep the patient informed if any adjustments become necessary.*

- The usual start is on Monday. If a patient has been given an estimation of 5 days, encourage them to arrive on Sunday
- Treatment time may be shorter or longer depending on several factors, including clinical findings during the consultation, treatment progress, laboratory requirements, and any unforeseen circumstances.
- any necessary follow-up appointments
- The clinic is not open on weekends.

14:

Q. HOW MANY DAYS WILL I NEED TO BE IN BUDAPEST FOR CROWNS?

- Typical: 5 working days is usually required for 1 to 5 crowns.
 - o 1 Day to measure the crowns
 - o 3 days to make the crowns
 - o 1 day to fit the crowns.

NOTE: Plenty of time in between to discover Budapest or go to Vienna for a couple of days. (two hours by train)
- For more than five crowns: add one day up to 12 crowns (days) at which point it is 12 days regardless of the number of crowns needed.

15:

Q. DO YOU DO ALL-ON-4'S?

The big difference between individual dental implants and All on 4 is that **this technique requires only four implants to support the entire bridge, which reduces costs** and avoids the need for large bone grafts, and it is also much faster and more efficient.

Yes. Kreativ Dental provides All-on-4 and other full-arch implant solutions for suitable candidates.

The treatment timeline varies from patient to patient

Usually, the first visit involves consultation, diagnostic imaging, any necessary extractions, implant placement, and the fitting of a temporary bridge.

Treatment depends on several factors, including bone quality and quantity, the presence of infection, whether extractions are required, your medical history, and the treatment approach recommended by your implant surgeon.

Usually, a second visit is required to fabricate and fit the final restoration after the healing period. This technique for replacing missing teeth with a complete dental bridge, supported only by four titanium implants placed into the jawbone, ensures implant osseointegration and the complete retention of the prosthesis. (Look at the movie in the price list about this, in fact look at all the movies! Use them, send them to your clients to help educate them. It will help them make good decisions and build trust.

16:

Q. WHAT ARE SAMPLE TIME FRAMES FOR DIFFERENT PROCEDURES?

Procedure [1]	Est. Chair Time	Required Stay in Budapest
Initial Consultation & X-Rays	2 to 3 hours	1 day
Single Dental Implant	30 - 45 minutes	1 appointment
Crowns / Bridges (per arch)	1 - 2 hours (multiple appointments)	5 days
Multiple Implants + Abutments	1 - 2 hours	5 days
Full Mouth Reconstruction	Varies (extensive multi-stage)	12 to 15 working days (3-4 month healing interval)
Endodontic Treatment (Root Canal)	60 minutes	1 appointment

17: Q. HOW IS MY PAIN MANAGED?

COMFORT & SAFETY: Your Kreativ dentist will always prioritize your comfort and safety and will discuss the most appropriate approach based on your individual needs and their knowledge of the latest scientifically based comfort technologies.

IV sedation is NOT offered at this time.

HOW KREATIV DENTAL MANAGES PAIN

Gentle, pain-free dentistry with comfort and reassurance at every step

1. Gentle, pain-free approach

Kreativ Dental says its goal is to achieve a natural result with gentle, pain-free dentistry.

2. The Wand System

Kreativ Dental uses The Wand System — a computer-controlled dental injection. The local anaesthetic flows slowly and steadily, helping make the injection more comfortable.

3. Pain relief during treatment

For invasive treatment, the dentists use pain relief to help make the experience as comfortable as possible.

Used across crowns, implants, bridges, periodontal treatment, fillings, dentures, and root canal treatment.

4. Dental implants

Dental implants are placed using a simple local anaesthetic.

Most patients report they were more comfortable after the procedure than they had expected.

5. Support for nervous patients

- Empathetic dentists and staff
- Relaxing surroundings
- Large aquariums to help distract anxious patients
- iPads in the waiting room

6. Making visits less stressful

Agree on a hand signal

Ask for reassurance and explanations

Ask to handle the suction instrument if possible

Bring a friend or family member

Ask for extra appointment time

Bring music and headphones

Focus on breathing regularly

Communicate openly with your dentist

At Kreativ Dental, your comfort and peace of mind are at the heart of everything we do.

We listen.
We care.
We make it comfortable.

Source: kreativdentalclinic.eu/en

PATIENT-CENTERED COMFORT: Importantly, all Kreativ professionals are trained in the latest comfort technologies, thanks to the required ongoing Professional Development for all KD professionals

Local anesthesia - Most dental treatments are performed under **local anesthesia**, which numbs the treatment area so that you do not feel pain during the procedure.

Anxiety - For patients who experience dental anxiety, the team will take extra care to ensure you are comfortable throughout your visit. This includes taking additional time during treatment, gentle techniques, and ensuring you are relaxed and fully numb before proceeding. The patient can also bring their own anxiety medication from their own Dr or medical professional, with the original prescription and

the medication in the original packaging. THE DENTIST NEEDS TO KNOW THIS PRIOR TO STARTING TREATMENT.

KREATIV DENTAL

How Kreativ Dental Manages Anxiety

— Supportive care without IV sedation —

1 No IV sedation
Kreativ Dental does not currently offer IV sedation.

2 Local anaesthetic
Treatment is carried out using effective local anaesthetic to keep patients comfortable.

3 Gentle and experienced team
Our dentists and team understand that many patients feel nervous and take a calm, caring approach.

4 Breaks and communication
Patients can ask questions, take breaks when needed, and are supported throughout treatment.

5 Comfort through planning
Explaining each step in advance often helps reduce fear and makes treatment feel more manageable.

Many anxious patients complete treatment successfully at Kreativ Dental.

Final treatment recommendations are confirmed by the treating dentist.

After-Treatment - It is normal to experience mild discomfort or sensitivity as the area heals. If needed, your dentist will provide guidance on appropriate pain relief and aftercare instructions to support recovery.

18:

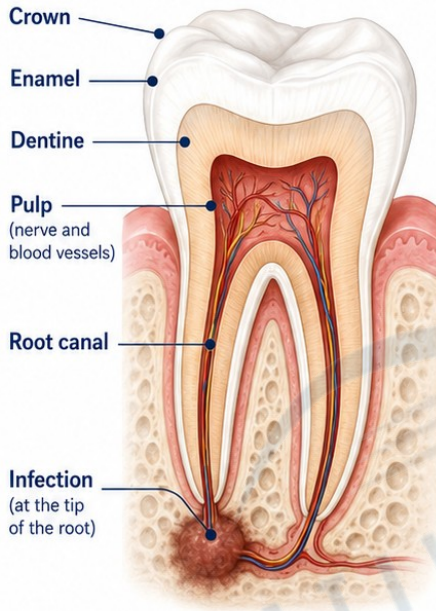

Q. CAN I HAVE A ROOT CANAL AND A CROWN AT THE SAME TIME?

- **Yes, sometimes.** In some cases, it may be possible to prepare and fit a crown shortly after root canal treatment. But not likely; it depends on several factors, including the condition of the tooth, the extent of any infection, the amount of remaining tooth structure, and your dentist's clinical assessment.
- For most patients, the dentist will recommend completing the root canal treatment first and monitoring the tooth before proceeding with the final crown.
- Unfortunately, it is not possible to provide an answer before arriving in Budapest. Your Budapest dentist will explain the available options and the timeline after the assessment.
- Kreativ Dental's priority is always to provide the most predictable long-term outcome for the tooth rather than simply the quickest solution.

(REFER TO THE NEXT TWO PICTURES ON NEXT TWO PAGES FOR FURTHER INFORMATION)

USA

How a Root Canal Is Done

A root canal treats infection inside the tooth, relieves pain, and helps save your natural tooth.

1

Examination and X-ray

The dentist checks the tooth and confirms infection inside the pulp.

2

Local anaesthetic

The area is numbed to keep the patient comfortable.

3

Access opening

A small opening is made in the top of the tooth.

4

Cleaning the canals

Infected pulp is removed and the root canals are cleaned and shaped with fine instruments.

5

Disinfection

The canals are rinsed and disinfected.

6

Filling the canals

The clean canals are sealed with a filling material.

7

Final restoration

The tooth is closed with a filling or crown to protect it.

Removes infection

Relieves pain

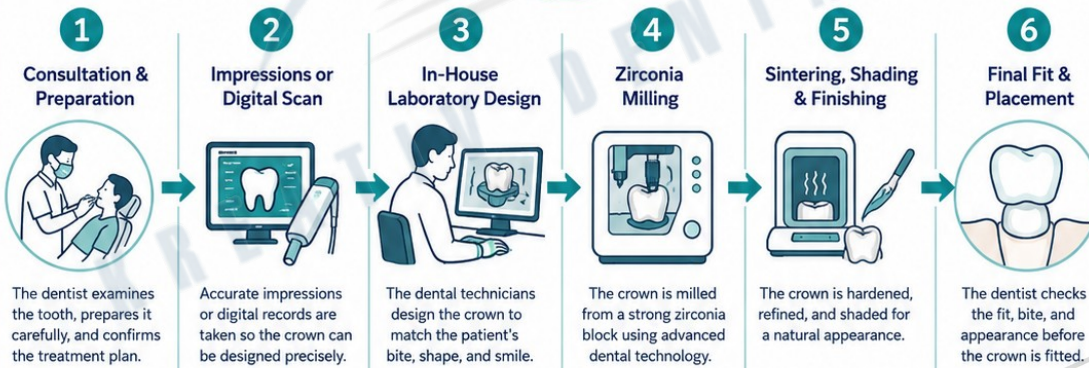

Helps save the natural tooth

Ask your dentist if a root canal is right for you.

TRAVEL, TRANSPORTATION, ACCOMMODATIONS, & SUPPORT

Q. WHAT ARE THE AIRPORT TRANSFER, HOTEL, AND DAILY TRANSPORTATION ARRANGEMENTS?

- **SUPERIOR.** Patients rave about the smooth, stress-free travel experience, which is part of the Kreativ Dental package, and includes both airport transfers and accommodation arrangements.
 - Check-In at the airport kiosk upon arrival (Terminal 2A).
 - Car and Driver will be waiting for you
 - You will be driven directly to Arena Hotel or your consultation depending on schedule.
 - Daily shuttle from hotel to clinic

(REFER TO THE NEXT TWO PAGES FOR FURTHER INFORMATION)

KREATIV DENTAL

Kreativ Dental Shuttle Service

— Shuttle departures every half hour —

For your convenience, the Kreativ Dental shuttle operates every 30 minutes.

The shuttle runs between the **partner hotel** and the **clinic**.

This makes getting to your appointments **easy, comfortable, and stress-free**.

Please check with **reception** for the latest departure times.

Partner Hotel

Kreativ Dental Clinic

COMFORTABLE. CONVENIENT. RELIABLE.

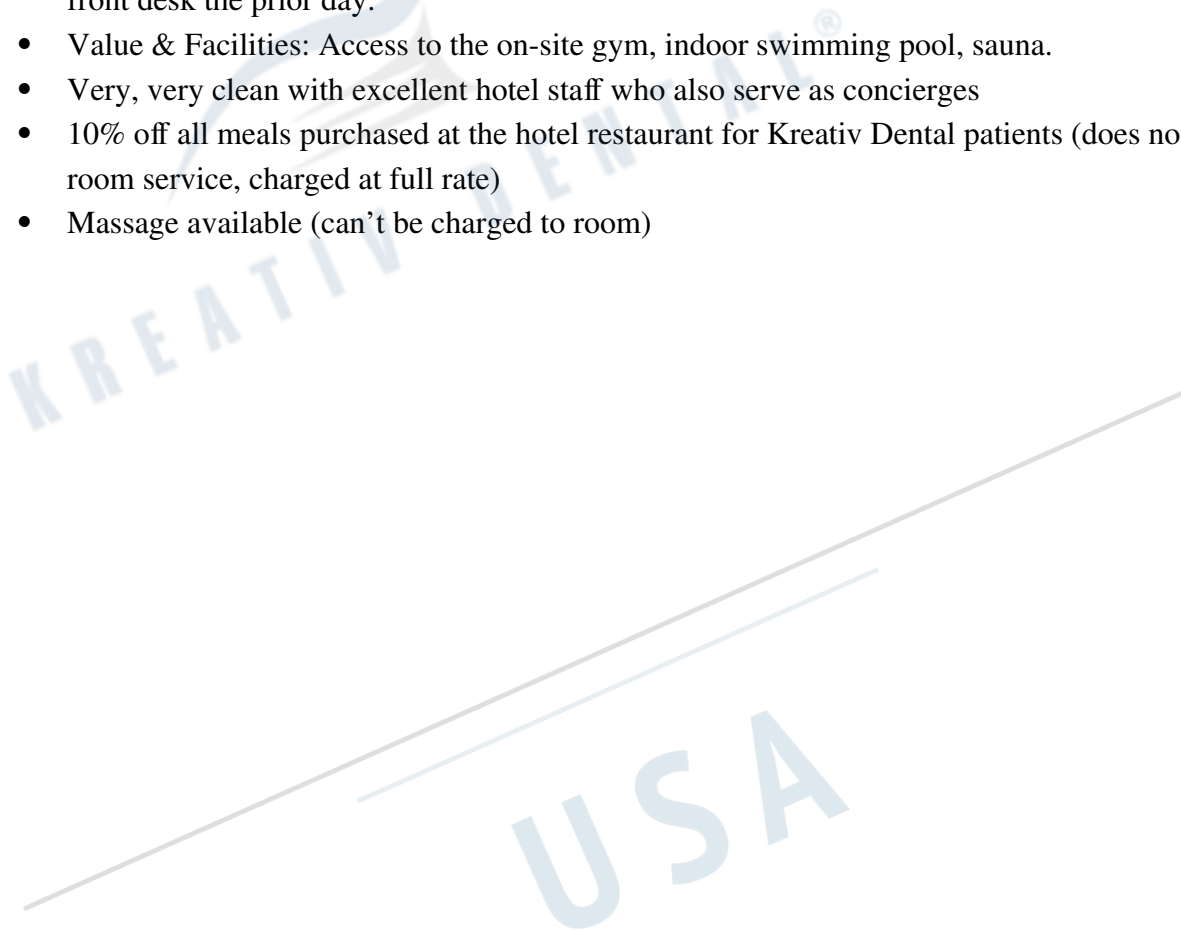

We make your journey as smooth as your smile.

FOCUS ON YOUR SMILE.
WE'LL TAKE YOU THERE.

WHY THE ARENA HOTEL? This hotel is a partner hotel and is the best possible choice, though other hotels are nearby:

- Special rates
- Daily pick-up to and from the clinic, which is synced with your clinic appointments. Just walk downstairs 15-30 min before your appointment.
- Prime Location: A one-minute walk from the *Puskás Ferenc Stadion* metro station, the city center is only 5 to 10 minutes away.
- Public transport is free for people over 65 however you must be able to show proof to transport inspectors on demand. This can be your passport or a driver's license, not a photo.
- Breakfast: The buffet has a massive selection of rotating continental, local, and international options. This is included in your room rate. The hotel will also prepare a boxed breakfast if you need to leave early for your dental appointment or airport, but you must request this at the hotel's front desk the prior day.
- Value & Facilities: Access to the on-site gym, indoor swimming pool, sauna.
- Very, very clean with excellent hotel staff who also serve as concierges
- 10% off all meals purchased at the hotel restaurant for Kreativ Dental patients (does not include room service, charged at full rate)
- Massage available (can't be charged to room)

20:

Q: WHY IS IT IMPORTANT TO INFORM MAIN AGENTS OF PATIENT TRAVEL PLANS AS SOON AS POSSIBLE?

- **IMPORTANT:** Once the travel details (flights/dates) have been provided to you, as sub-agents, you should make sure the main agents are aware of instructions regarding the patient as soon as possible:
 - **Scheduling:** Appointments need to be scheduled as soon as possible. Everything - airport pickup, hotel reservations, dental scheduling - will flow better than the earlier travel plans are known.
 - **The Main Agents will confirm the booking has been made and provide you with confirmation, once done, you will confirm this with the client and include in your response the document “What to expect in Budapest”** this contains much information that is helpful to them. Check in with them to ensure they have read it, and review line-by-line if necessary.
 - **Get the patient to Photograph the “What to expect in Budapest letter”.** Suggest that patients use their phone to take a picture of it for future reference. This letter needs personalizing in several places do not send it without first doing this.

21:

I ONLY WANT TO HAVE ONE DENTAL TRIP TO BUDAPEST. IS THIS POSSIBLE?

We understand that many international patients would prefer to complete their treatment in a single visit to Budapest. However, the number of visits required depends entirely on your individual clinical circumstances and the treatment recommended by your dentist.

While some treatments can be completed during one visit, others may require additional appointments to allow for healing, laboratory procedures, or to ensure the best possible long-term outcome.

Unfortunately, it is not possible to guarantee that treatment can be completed in a single trip before they have been examined by the dental team. Any treatment plan provided prior to their consultation is provisional and may change following a clinical examination and diagnostic imaging.

Our dentists will always consider patient travel requirements when planning treatment and will discuss all available options with them. However, clinical considerations and long-term treatment success must remain the primary factors in determining the appropriate treatment schedule.

22:

QUESTION.

WILL I HAVE DENTAL APPOINTMENTS EVERY DAY

Treatment schedules vary depending on the type of dental work being carried out and your individual treatment plan.

Some procedures require appointments on consecutive days, while others involve rest days between treatments to allow for healing, laboratory work, or clinical planning. In many cases, patients do not receive dental treatment every single day during their stay in Budapest.

Your dentist will structure your treatment schedule in a way that allows sufficient time for clinical procedures to be completed safely and to the highest standard, while also taking into account your overall treatment needs.

The exact day-by-day schedule can only be confirmed after your consultation. Once your full treatment plan has been completed, the patient will be given an appointment card detailing all of their appointments and the days on which they occur.

23:

QUESTION.

WHAT DAY SHOULD I PLAN TO ARRIVE IN BUDAPEST TO START TREATMENT

The dental week usually starts on Monday

The best day to arrive in Budapest is typically on Sunday before your scheduled consultation.

This allows you time to travel comfortably, settle in, and be well-rested before your appointment at the clinic.

Your first appointment is usually a consultation, during which your dentist will conduct a full clinical assessment and confirm your personalized treatment plan. In some cases, treatment may begin shortly after the consultation, depending on your clinical needs and the time required for any additional diagnostic procedures.

For this reason, we recommend planning to arrive at least one day before your first clinic appointment to ensure you are fully prepared and not rushed after travel.

Once you have accepted a treatment plan, our team will provide you with an appointment card detailing appointment times and treatment dates.

24:

QUESTION:

WHAT ARE CROWNS MADE FROM?

At Kreativ Dental, dental crowns are made using modern, high-quality, metal-free materials designed to provide both strength and a natural appearance.

The most used materials are **full ceramic (porcelain) and zirconia**.

Zirconia crowns are highly durable and strong, making them an excellent choice for back teeth where chewing forces are greatest. They are also widely used in more complex restorative cases where long-term strength and stability are important.

Full ceramic crowns are highly aesthetic and are often chosen for front teeth or visible areas of the mouth. They are designed to closely mimic the translucency and natural appearance of real teeth, making them an excellent option where appearance is a priority.

In many cases, different materials may be recommended for different teeth within the same treatment plan to achieve the best balance between function and aesthetics.

Your dentist will carefully assess your bite, tooth position, gum health, and overall treatment goals before recommending the most suitable material for your individual case. The final decision is always made after a full clinical examination and consultation in Budapest.

INFORMATION:

When a person has lost a tooth a long-time ago two things start to occur, one is that bone loss will begin to occur in this area so therefore if an implant was to be placed there a bone graft would probably be needed and a bridge would be considered as another possible solution. The second thing that occurs is that without the original tooth in place to maintain location, the teeth surrounding the gap move, this leads to secondary issues with bite etc.

25:

DENTAL IMPLANTS

Q: Am I a candidate for dental implants?

A: Most patients are suitable candidates for implants. However, bone quantity, bone quality, medical history, oral health, and lifestyle factors must all be evaluated before a dentist can confirm suitability.

Q: How long does implant treatment take?

A: Treatment times vary. Most cases can be completed in 8 months, Extraction 4 months healing, Implant 4 months healing then crown. While more complex cases involving bone grafting may take longer.

Q: Do implants hurt?

A: Implant placement is typically performed under local anesthetic. Most patients report less discomfort than they expected and often compare it to a routine dental extraction.

Q: How long do dental implants last?

A: With proper care and maintenance, dental implants can last many years and often decades.

26:

Q: What implant brands do Kreativ Dental use?

A: Straumann, Nobel Bio Care and Cowell Medi are the systems used by the clinic. The clinic won't use other systems even upon request. The Clinic will work with existing systems however which have already been placed for patients. In this case we need to obtain detailed information about the implants so we can check whether or not there is a Hungarian or at least a European retailer. This needs to be confirmed before the patient is booked to avoid wasted trips. (Ask the patient for their dental passport if they don't have it they will need to contact the person who placed the implant.)

27:

QUESTIONS:

WHAT IS THE DIFFERENCE BETWEEN THE IMPLANT BRANDS

Dental implant systems such as **Straumann, Nobel Biocare, and Cowell Medi** are all widely used systems in modern implant dentistry, and all are designed to replace missing teeth safely and effectively. The main differences between them relate to their **design philosophy, materials, surface technology, and long-term clinical documentation**.

Straumann implants are Swiss-made and are among the most extensively researched implant systems in the world. They are known for their high-quality engineering, strong clinical evidence base, and advanced surface technologies designed to support predictable bone integration.

Nobel Biocare implants are also a well-established Swiss system and were one of the pioneers of modern dental implant treatment. They are widely used globally and are known for their versatility in both simple and complex implant cases, including full-arch restorations.

Cowell implants are a more recent implant system that is used in a number of international clinics. Like other modern systems, they are designed to meet current standards of implant dentistry, but they typically have a shorter long-term clinical track record compared to the more established systems mentioned above.

In practice, all three systems can be suitable when correctly planned and placed. The most important factor for success is not only the implant brand, but the **clinical assessment, surgical technique, bone quality, and the experience of the implant team**.

For patients from America and Canada the main benefit of using the more expensive systems, Straumann and Nobel is that American and Canadian dentists will be familiar with the brand and will likely have the necessary tools to work with these implants. This may be more reassuring too patients.

(REFER TO IMAGES ON THE NEXT TWO PAGES FOR FURTHER INFORMATION)

Implant Brand Comparison

Understanding the practical differences

1  straumann   Origin European-made  Material Titanium  Practical note for U.S. patients Widely recognized in the U.S.; local U.S. dentists are more likely to be familiar with it.  Value / pricing impression Premium brand pricing	2  Nobel Biocare™   Origin European-made  Material Titanium  Practical note for U.S. patients Widely recognized in the U.S.; local U.S. dentists are more likely to be familiar with it.  Value / pricing impression Premium brand pricing	3 COWELLMEDI®   Origin South Korean  Material Titanium  Practical note for U.S. patients Less well known in the U.S., but parts/components can still be ordered quickly.  Value / pricing impression Generally a better-value option
 What stays the same ✓ Titanium material ✓ Similar healing time ✓ Similar success rate ✓ Final choice depends on the dentist's recommendation and the patient's needs	 Kreativ Dental experience • Previous standard system: DIO (South Korea) • Nearly 100,000 DIO implants placed over about 10 years • Cowellmedi has been used by the clinic since about 2025 with excellent early results	
 VALUE NOTE: European premium brands may cost around 2x more, often due largely to brand recognition and market positioning.

28:

Q: What is a sinus lift and why is it necessary?

A: A sinus lift is a dental procedure that adds bone to the upper back jaw, usually in the area of the molars and premolars.

The maxillary sinus is an air-filled space located above the upper jaw. In some patients, there is not enough bone between the mouth and the sinus to safely support a dental implant. This can happen when upper back teeth have been missing for a long time, because the bone naturally shrinks after tooth loss. In some cases, the sinus may also sit too close to the jaw.

During a sinus lift, the dentist gently raises the sinus membrane and places bone graft material underneath it. This creates more bone height and a stronger foundation for a future dental implant.

A sinus lift may be necessary if there is not enough bone to hold the implant securely. The purpose is to improve implant stability, support long-term success, and reduce the risk of implant failure.

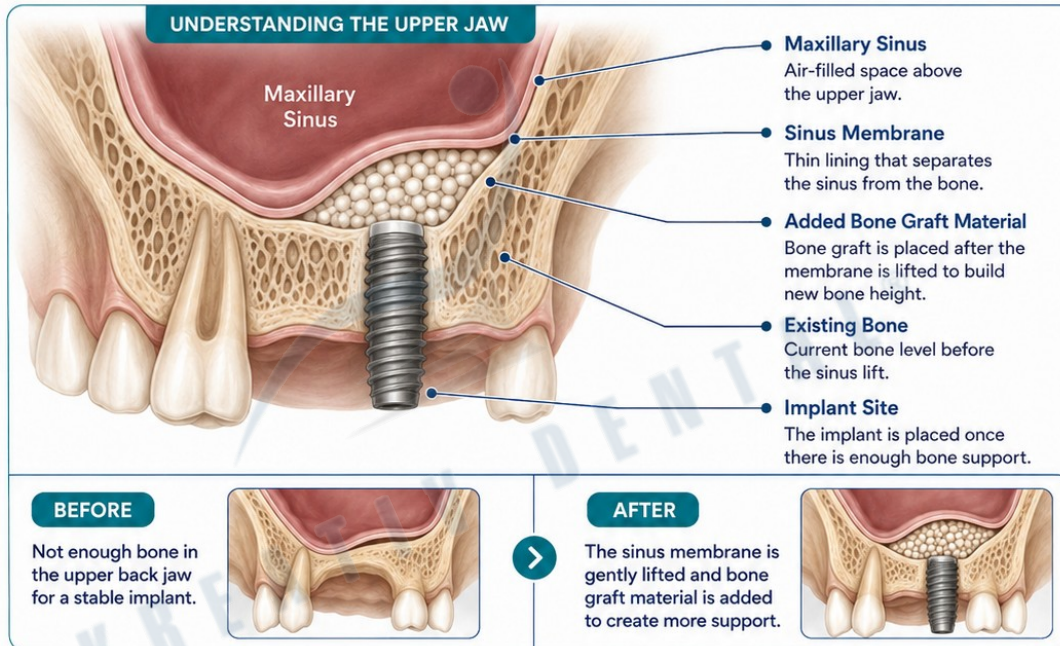

Not every patient needs a sinus lift. The dentist will determine this after reviewing your X-rays or CBCT scan and completing your clinical examination.

(REFER TO NEXT IMAGE FOR FURTHER INFORMATION)

USA

What Is a Sinus Lift?

Why it may be necessary before dental implants

WHAT IS A SINUS LIFT?

- ✓ A sinus lift is a procedure that gently raises the sinus membrane and adds bone to the upper back jaw.
- ✓ It creates enough bone height to support a dental implant safely and securely.

WHY IT MAY BE NECESSARY

- ✓ Bone loss can occur after a tooth has been missing for a long time
- ✓ The sinus cavity may sit too close to the jaw
- ✓ There may not be enough bone height for an implant
- ✓ It helps improve long-term implant stability

WHEN IT IS COMMONLY RECOMMENDED

- ✓ Missing upper back teeth
- ✓ Low bone volume seen on CBCT or X-rays
- ✓ Planning for dental implants in the upper molar or premolar area

NOT EVERY PATIENT NEEDS A SINUS LIFT.

Your dentist will determine this after examination and imaging.

Educational overview only. Final treatment recommendations are confirmed by the treating dentist.

29:

Many people had their wisdom teeth removed using local anesthetic (myself included) and this is a common process. IV sedation is often suggested in the U.S. and Canada but this increases the cost of the process considerable but does not change or improve the outcome in any way.

KREATIV DENTAL

Wisdom Teeth Removal: Is local anaesthetic really offered in the USA?

A practical comparison for patients considering their options

Many U.S. oral surgery practices	Kreativ Dental Budapest
 1. Local anaesthetic may be technically available	 1. No IV sedation or general anaesthetic currently offered
 2. But many patients are strongly directed toward IV sedation, deep sedation, or general anaesthetic	 2. Wisdom tooth extraction is generally performed using local anaesthetic
 3. This is especially common when 4 wisdom teeth are removed or teeth are impacted	 3. This can make treatment far more affordable for suitable patients
 4. The result can be much higher total costs	 4. Final suitability depends on examination and X-rays
 Many patients feel they are not given a meaningful local-anaesthetic-only choice.	 For patients suitable for local anaesthetic, Budapest may offer major savings.

Why the U.S. cost can be so high

 Oral surgeon fees	 Sedation or general anaesthetic fees	 Monitoring and staffing	 Facility and insurance-related costs
--	---	--	--

Important

 This is a general educational guide only	 Not every U.S. practice works the same way	 Treatment decisions should be made after professional assessment
---	---	---

Kreativ Dental offers a clear local-anaesthetic pathway for suitable wisdom tooth cases.

Before you accept a **shocking** U.S. dental quote, compare **Budapest.**

The clinic specifically treats patients requiring complex restorative treatment, including full-mouth rehabilitation, multiple implants, crowns, bridges, and cosmetic procedures.

Each treatment plan is tailored to the individual patient after examination and diagnostic imaging.

31:

COSTS AND PAYMENT

Payment:

As a good faith gesture, a payment of 50% of your current visit plan is required prior to the commencement of any dental work.

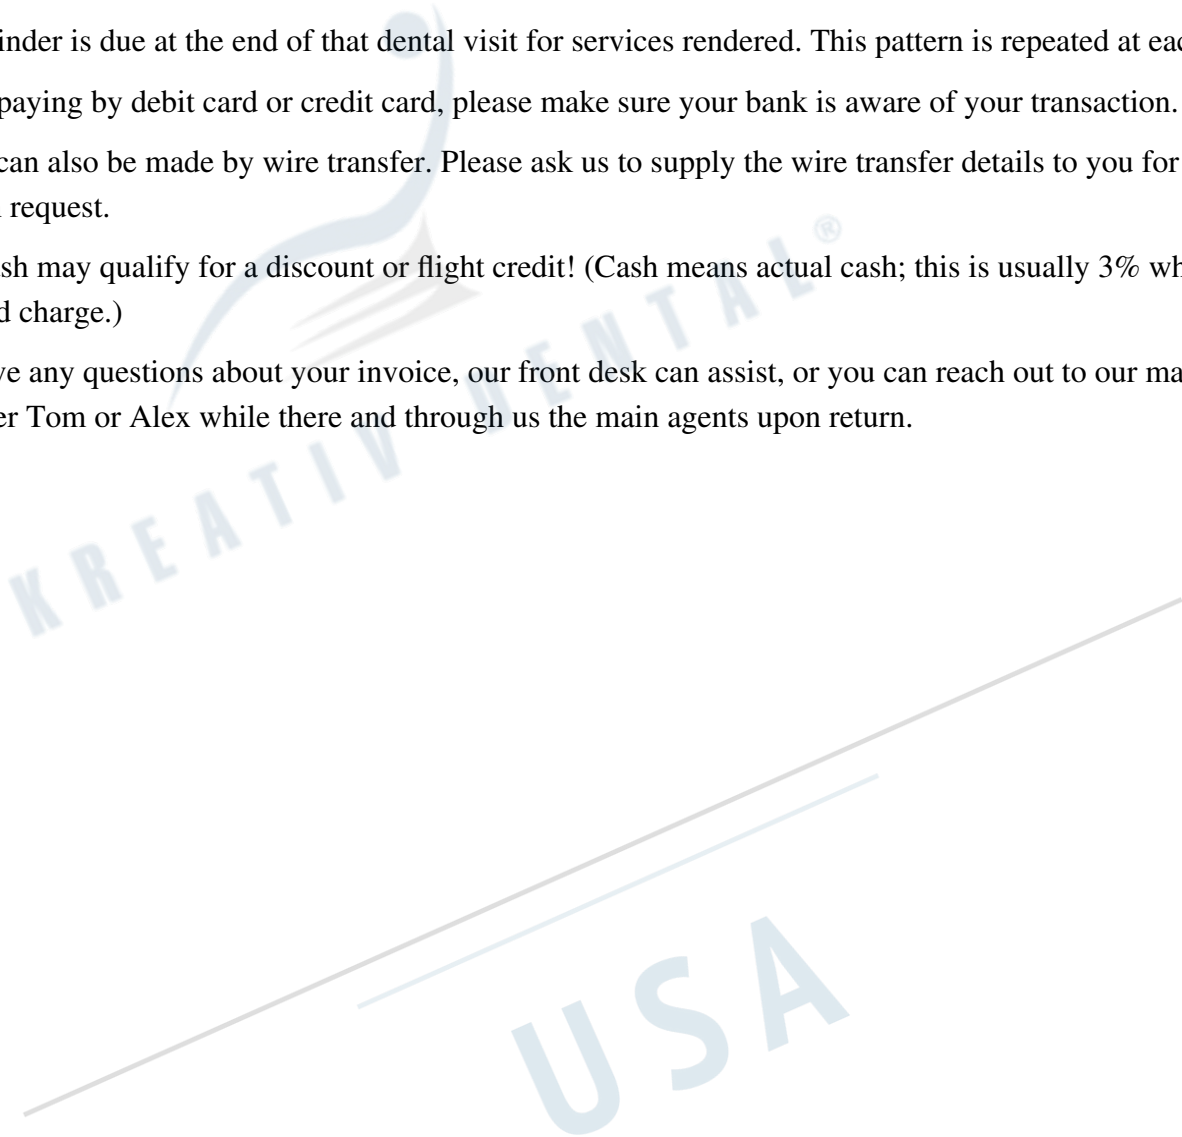

The remainder is due at the end of that dental visit for services rendered. This pattern is repeated at each visit.

If you're paying by debit card or credit card, please make sure your bank is aware of your transaction.

Payment can also be made by wire transfer. Please ask us to supply the wire transfer details to you for the patient on request.

Paying cash may qualify for a discount or flight credit! (Cash means actual cash; this is usually 3% which is the credit card charge.)

If you have any questions about your invoice, our front desk can assist, or you can reach out to our management team either Tom or Alex while there and through us the main agents upon return.

KREATIV DENTAL®

Important payment information for your treatment.

1

As a good faith gesture, a payment of **50%** of your current treatment plan is required prior to the commencement of any dental work. **This payment requirement repeats each visit.**

2

The remainder is due at the end of your dental treatment for services rendered.

3

If you're paying by debit card or credit card, please make sure your bank is aware of your transaction.

4

Paying by cash may qualify for a **discount** or **flight credit!**

5

If you have any questions about your invoice, our front desk can assist, or you can reach out to our management team, either **Tom** or **Alex**.

Thank you for choosing Kreativ Dental.

Q: How much will my treatment cost?

A: Agents are responsible for informing dental patients about treatment costs by referring to the official price list on the Kreativ Dental website.

This is an important part of your role as an agent. You are not expected to diagnose or prepare a complex treatment plans, you are expected to answer simpler questions and you can often give patients a good idea of costs if they provide you with enough information (we will help you with this until you gain some experience) but you are expected to help patients understand the pricing structure, explain where the official prices can be found, and guide them through the general cost information available. The clinic is far too busy to answer simple questions we will help you. This is one of the purposes of this document!

This is part of what you are being remunerated for: helping dental patients feel informed, supported, and confident enough to take the next step toward booking their consultation with Kreativ Dental.

You are expected be able to answer questions like

How will an implant cost?

How much will my extraction cost?

How much will my root canal cost?

That is why you should be familiar with the price list on your website.

The dental team will give you additional price information once they look at the X-Rays, CBCT scans, and the dental plan from their own dentist if it can be obtained.

A theoretical plan can also be prepared to help the patient prepare for the expected treatment cost.

32:

SAMPLE THEORETICAL TREATMENT PLAN

Fictitious Example for Agent Training Purposes Only

Important: This is a sample theoretical treatment plan. It is not a final diagnosis, not a confirmed treatment recommendation, and is not a binding quotation.

A theoretical treatment plan may be prepared before the patient travels to Budapest when the patient has supplied X-rays, CBCT scans, photographs, and/or a treatment plan from their local dentist. If the patient is requesting information regarding the cost and timing of certain procedures, then you will create a proposed treatment plan. We will help you with this until you are familiar. The clinic will always be consulted once any inquiry involves the need to study x-rays etc as this is outside of our scope of expertise.

The final treatment plan, treatment sequence, timing, and cost can only be confirmed after an in-person consultation, clinical examination, and diagnostic imaging at Kreativ Dental.

Patient Example

Patient: Sample Patient

Quotation Type: Theoretical treatment plan based on records sent in advance

Prepared for: Agent training / patient education example

Currency: USD

Status: Subject to clinical confirmation in Budapest

Initial Situation

The patient has multiple missing, damaged, or failing teeth. Some teeth may require extraction. Several teeth may require crowns or build-ups. Implants may be possible after healing, depending on bone condition.

Because the patient has not yet been examined in person, this plan is theoretical only. The clinic would be involved in creating the following plan. It would not be your responsibility to prepare, however you need to know how to read it so you can discuss it with the patient!

Planned Treatment Overview

The treatment may require three separate treatment stages:

1. **Visit 1:** Consultation, hygiene, extractions, temporary crowns or temporary bridge
2. **Visit 2:** Implant assessment and possible implant placement
3. **Visit 3:** Final crowns, implant crowns, bridge work, and bite registration

VISIT 1

Consultation, Preparation, Extractions & Temporary Teeth

Item	Treatment	Teeth	Price/pc	Qty	Estimated Cost
1/1	Ortho-Pantograph X-ray	—	\$0	1	\$0
1/2	Consultation	—	\$0	1	\$0
1/3	Consultation with oral surgeon	—	\$0	1	\$0
1/4	Dental hygienic treatment	—	\$80	1	\$80
1/5	Injection / local anesthetic	8 ampoules	\$3	8	\$24
1/6	Crown removal	46	\$30	1	\$30
1/7	Surgical extraction	27, 28, 31, 41, 42, 46	\$195	6	\$1,170
1/8	Dissolvable stitches	—	\$45	1	\$45
1/9	Medical package	—	\$45	1	\$45
1/10	Temporary crown / bridge unit without guarantee	32, 33, 43	\$25	3	\$75

1/11	Long-term temporary crown / bridge unit without guarantee	31, 32, 33, 41, 42, 43	\$90	6	\$540
------	--	---------------------------	------	---	-------

Estimated duration of Visit 1: 5 working days

Estimated healing period after Visit 1: approximately 3 months

Estimated total for Visit 1: \$2,009 USD

Important note: Treatment during this visit may vary depending on the condition of the existing teeth, gums, and periodontal tissues.

VISIT 2

Implant Assessment & Possible Implant Placement

Item	Treatment	Teeth	Price/pc	Qty	Estimated Cost
2/1	Ortho-Pantograph X-ray Consultation	—	\$55	1	\$55
2/2	with oral surgeon	—	\$0	1	\$0
2/3	CBCT scan, if necessary	—	\$110	1	\$110
2/4	Injection / local anesthetic Cowellmedi Inno Fixture	6 ampoules	\$3	6	\$18
2/5	Implant, titanium abutment included	15, 16, 26, 27, 31, 42, 46	\$750	7	\$5,250
2/6	Healing cap per implant	15, 16, 26, 27, 31, 42, 46	\$40	7	\$280
2/7	Dissolvable	—	\$45	2	\$90

	stitches				
2/8	Medical package	—	\$45	1	\$45

Estimated duration of Visit 2: 4 working days

Estimated healing period after Visit 2: approximately 4 months

Estimated total for Visit 2: \$5,848 USD

Important note: The possibility of implant placement depends on the bone situation after healing. Implant placement cannot be guaranteed before the patient has been examined.

VISIT 3

Final Restoration: Crowns, Implant Crowns, Bridge Work & Bite Registration

Item	Treatment	Teeth	Price/pc	Qty	Estimated Cost
3/1	Ortho-Pantograph X-ray	—	\$55	1	\$55
3/2	Face Bow bite registration	—	\$460	1	\$460
3/3	Injection / local anesthetic	20 ampoules	\$3	20	\$60
3/4	Stump build-up	11, 12, 17, 21, 36, 37	\$55	6	\$330
3/5	Temporary crown / bridge unit without guarantee	Multiple teeth	\$25	23	\$575
3/6	Porcelain fused to High Translucent Zirconia Crown	Multiple teeth	\$550	20	\$11,000
3/7	Porcelain fused to High	15, 16, 26, 27, 31, 42, 46	\$580	7	\$4,060

	Translucent Zirconia Crown on Implant Porcelain fused to High				
3/8	Translucent Zirconia Bridge Unit	41	\$550	1	\$550
3/9	Night guard	Upper	\$200	1	\$200

Estimated duration of Visit 3: 12 working days

Alternative timing option:

5 working days + 1 week break + 5 working days

Estimated total for Visit 3: \$17,290 USD

Estimated Total Treatment Cost

Visit	Estimated Cost
Visit 1	\$2,009
Visit 2	\$5,848
Visit 3	\$17,290

Estimated total cost of treatment: \$25,147 USD

Important Notes for the Patient

This plan is theoretical and is based only on the information available before the patient's in-person consultation.

The final treatment plan may change after:

- Clinical examination
- Updated X-rays or CBCT scan
- Assessment of bone quality and quantity
- Assessment of gum and periodontal condition
- Review of existing crowns, root canals, or failing teeth
- Discussion with the treating dentist or oral surgeon

The dentist may recommend fewer procedures, additional procedures, a different implant plan, a longer healing period, or a different restoration option after examining the patient.

Agent Explanation

Agents may use this type of theoretical plan to help a patient understand likely treatment stages, estimated working days, healing periods, and approximate costs.

Agents must not present this as a guaranteed final plan.

The correct wording is:

“This is a theoretical treatment plan based on the information available before your in-person consultation.

The total cost of your treatment is:

25 147 USD

Important: This is a theoretical treatment plan based on records sent in advance. Final treatment recommendations, timing, and costs can only be confirmed after in-person examination in Budapest.

- 33:
- Q: Are there hidden costs?**
- A: No.** The clinic aims to provide clear and transparent pricing. If additional treatment becomes necessary, the dentist will discuss this with the patient before proceeding.

34:

TRAVEL AND ACCOMMODATION

Q: Can you help with accommodation?

A: Yes. Through you as Subagents we arrange and book accommodation for the patient at our partner hotel, the Danubius Hotel Arena.

Kreativ Dental patients receive a special rate at the hotel, which makes staying in Budapest easier, more convenient, and more affordable during your dental treatment.

The hotel is a popular choice for our patients because it offers complimentary breakfast and access to the Kreativ Dental shuttle service, which helps transport patients between the hotel and the clinic.

This means they do not have to worry about finding their own way to their appointments each day. The accommodation and shuttle service are designed to make the dental journey as smooth, comfortable, and stress-free as possible. The subway is a two-minute walk and 4 stops to the middle of the city (ten minutes)

Patients over 65 travels free throughout Hungary but need to carry ID to prove this if asked!

BUDAPEST TRANSPORT TIP

Explore Budapest

EASY TO GET AROUND.
MORE TO DISCOVER.

35:

Q: How far is the clinic from the airport?

A: Budapest's international airport is approximately 30–45 minutes from central Budapest, depending on traffic conditions.

36:

Q: Is Budapest safe?

A: Hungary is rated as the 17th safest country in the world (America is 124th) and Budapest is considered a safe and welcoming city for international visitors and is one of Europe's most popular tourist destinations. The city water from the tap is safe to drink, good luck with that in Turkey or Mexico!

37:

GUARANTEES AND AFTERCARE

Q: Does Kreativ Dental provide a guarantee on treatment?

A: We have one of the best guarantees in the industry

THE WEB SITE HAS THE LINK TO THE GUARANTEE, EMAIL IT TO THEM

A COPY OF THE GUARANTEE IS PROVIDED IN THEIR TREATMENT PLAN FOR THEIR FUTURE REFERENCE

<https://kreativdentalclinic.eu/en/guarantee> Link to Guarantee

(Refer to picture on next page)

Kreativ Dental Guarantee

Confidence in every smile

Kreativ Dental offers one of the most extensive dental guarantees in Eastern Europe because of the high standard of workmanship and the quality of materials used.

OUR KEY PROMISES

Flights covered up to **€250** for necessary remedial work

★★★★ Accommodation in a partner hotel **included** for the duration of necessary remedial work

€100 allocated for minor repairs by your own dentist (for example re-cementing crowns or denture adjustment)

GUARANTEE PERIODS

	Face Bow Registration	Arcus Digma II Bite Registration
DIO Implants (product only: screw and abutment)	Lifetime	Lifetime
Crowns / Bridges (temporaries not included)	5 years	6 years
Inlay / Onlay	5 years	6 years
Ceramic Veneers	3 years	5 years
Combination Work / Cast Partial and Clasp Dentures	3 years	4 years
Over-Dentures (e.g. Locator, Telescopic Denture, Telescopic Crowns, Clip Bar System)	3 years	4 years
Full Dentures	1 year	2 years
Composite Fillings	1 year	1 year

Please note the following will void your guarantee

No annual check-up at Kreativ Dental or with your local dentist with x-ray and written proof

Neglected oral hygiene

Dentists' instructions are not followed

Removable restorations are not maintained properly

Natural gum tissue or bone recession

Accidental damage

Substantial weight change in a short time

General illness affecting dental condition (examples: diabetes, epilepsy, osteoporosis, after x-rays or chemotherapy)

Corrective or additional treatment done by another dentist without Kreativ Dental's prior consent

Kreativ Dental is not liable for problems that were not visible on the patient's x-ray and were not foreseeable or predictable at the time of treatment.

Only a clinic working to the **highest standards** can offer such generous guarantee terms.

Q: What happens if I have a problem after returning home?

A: If the patient experiences any concern after returning home, they should contact their agent. The agent needs to find out what the issue is, check if they have had their annual checkups, and ask for a description and pictures of the problem which will in turn be sent to the clinic through the main agents for review.

If the problem is related to treatment completed at Kreativ Dental, the clinic will review the situation carefully and advise you according to the individual case and any applicable guarantee or aftercare policy.

Patients should not ignore symptoms or wait too long before asking for advice. The sooner the clinic is informed, the easier it is for the team to help guide you properly to resolve the issue.

38:

Q: Will I need maintenance after treatment?

A: Yes. Regular dental maintenance is essential for protecting your long-term dental health and helping your treatment last as long as possible.

After your treatment is completed, you should continue to have regular dental examinations, professional cleanings, and maintain excellent oral hygiene at home.

To maintain your Kreativ Dental guarantee, you are required to have an annual dental examination with your local dentist. This helps ensure that any small issues are identified early and properly managed.

If you return to Kreativ Dental in Budapest, the clinic can also provide your annual examination free of charge.

Failure to have an annual Checkup will void the Guarantee.

39:

Q: I have diabetes. Can I have dental implants?

A: Many patients with diabetes can successfully receive dental implants. However, each case is different and must be carefully assessed by the treating dentist.

The most important factor is how well your diabetes is controlled. Patients with well-managed diabetes are still suitable candidates for implant treatment, but the dentist will need to review your medical history, current medications, healing ability, oral health, bone condition, and any other risk factors.

Before treatment, you should inform the clinic that you have diabetes and provide any relevant medical information. In some cases, the dentist may also recommend that you speak with your doctor before beginning treatment.

Good oral hygiene, regular dental maintenance, and stable blood sugar levels are especially important for diabetic patients, both before and after implant placement.

The final decision can only be made after an in-person consultation and clinical assessment at the clinic.

40:

Q: I smoke. Can I have implants?

A: Smoking can affect healing and implant success rates. The dentist will evaluate your circumstances and discuss any increased risks. Rarely would this stop you receiving implants.

41:

Q: I take medication. Will that be a problem?

A: Patients should provide a complete list of medications and medical conditions. This is part of your consultation when you first arrive at the clinic. The dentist will review this information before recommending treatment. If the patient has concerns prior to leaving, then get the information from them and give it to the main agent for review by the clinic in advance. The greatest concern for the Clinic is blood thinners. It is good for the clinic to know about this in advance and the reason the patient is taking them for, Medication effecting the INR level have to be below 2.0 for the clinic to treat patients. (The patient may have to consult with their doctor before coming to Budapest)

42:

QUESTIONS AGENTS SHOULD NEVER ANSWER

Agents must never:

- : Diagnose dental conditions.**
- Guarantee treatment outcomes.**
- Promise exact treatment costs before clinical assessment.**
- Recommend specific procedures without dentist approval.**
- Predict implant suitability.**
- Offer medical opinions outside their training.**

(Refer to picture below)

Agents **Must** Never:

-   Diagnose dental conditions.
-   Guarantee treatment outcomes.
-   Promise exact treatment costs before clinical assessment.
-   Recommend specific procedures without dentist approval.
-   Predict implant suitability.
-   Offer medical opinions outside their training.

**Professional guidance.
Trusted service.**

WORKING TOGETHER. PUTTING PATIENTS FIRST.

If you are uncertain you should say:

“Based on the information available, it is not possible to give you an answer as there are too many variables and it would be inappropriate to guess. One of our dentists will need to review higher quality records or, where necessary, perform an in-person examination before providing accurate advice.”

43:

AGENT GOLDEN RULE

When uncertain, do not guess.

Patients trust Kreativ Dental because of its professionalism, honesty, and integrity. It is always better to say “I don’t know, but I will find out for you” than to provide inaccurate information.

44:

OUR BIGGEST COMPETITOR IS CORRUPT

Our biggest competitor is corrupt. If your client says that they are comparing us to other clinics in Budapest then this is probably the most likely comparison they will make.

We provide them this information about Helvetic Clinic, so people don’t get fooled they are not good people.

<https://pinatscandal.com/helvetic-clinics-scandal/>

45:

THE FOLLOWING DOCUMENT “WHAT TO EXPECT IN BUDAPEST”

We always provide this document to patients prior to their leaving and encourage them to take pictures of it with their phones for future reference. We also send it to people who want information about the Clinic and Budapest as they are deciding what they want to do. READ IT you will see that it needs to be personalized in several places with names and flight details etc DO NOT JUST SEND IT.

Here's What to Expect During Your Budapest Experience:

Your Appointment would be at this address

Kreativ Dental Clinic

Address: 1141 Budapest, Vezér utca 100, Hungary

Phone: +36 1 222 01 99

1. Airport Pickup:

Once we have your arrival information, we will organize your welcome package and your airport transportation.

When you arrive at Franz Liszt International Airport, head to the Kreativ Dental Kiosk Desk in Terminal 2A (not 2b) after you exit to the baggage claim area.

If you run into any issues, feel free to stop by the Tourist Information desk, and they can help you get in touch with us or your hotel. No worries—everyone at the airport speaks English!

KREATIV DENTAL®

WELCOME TO BUDAPEST!

WE'RE HERE TO MAKE YOUR ARRIVAL EASY.

DIRECTIONS TO KREATIV DENTAL KIOSK DESK

-  **1** When you arrive at Franz Liszt International Airport, head to the **Kreativ Dental Kiosk Desk in Terminal 2A (not 2B)** after you exit to the baggage claim area.
-  **2** If you run into any issues, feel free to stop by the **Tourist Information desk**, and they can help you get in touch with us or your hotel.
-  **3** No worries—everyone at the airport speaks English!

Our team will be happy to meet you at the kiosk and assist with your transfer.

Need help?

Visit the Tourist Information desk anytime – they can contact us or your hotel for you.

THANK YOU FOR CHOOSING KREATIV DENTAL – WE WISH YOU A SMOOTH ARRIVAL AND A GREAT STAY!

3. Appointment:

Your first consultation appointment will be made once we have your flight details and you will be given your appointment card at the airport.

Times might shift a bit due to flight delays or how busy the clinic is, but rest assured we'll get you in as soon as we can to kickstart your treatment.

4. Your Visit to Kreativ Dental:

When you arrive at the clinic, our staff will greet you. You'll fill out some registration forms, then we'll take your 3D dental x-rays, or Cone Beam Computed Tomography (CBCT) scans (these are advanced dental imaging techniques that create three-dimensional views of the teeth, jaw, bones, nerves, and soft tissues, offering far greater detail and accuracy than traditional 2D x-rays.) We will have the dentist review them. After that, you'll have your first consultation where the dentist will discuss a personalized Treatment Plan just for you!

5. Treatment Plan:

Your treatment plan will include different options, all clearly laid out with prices. If you have any questions or need clarification, just let our front desk know! Once you confirm your plan, we'll provide you with a treatment schedule and any instructions you might need. You will probably start your treatment right away, so please delay planning your social activities accordingly.

6. Problem Solving:

Our front desk staff is here to help with any issues you might have. If you need further assistance, you can always ask to speak with management; Tom or Alex are always ready to lend a hand.

7. Post-Treatment Guidelines:

We'll give you clear instructions on medication, oral care, hygiene, dietary tips, and long-term management to ensure your recovery goes smoothly.

8. Sky Café:

The Sky Café Manager is available to answer questions about Budapest. The café offers Wi-Fi, computer stations, and a printer for your convenience, along with delicious coffee and healthy snacks. If you find yourself waiting there between treatments, just let our staff know, and they'll call you when it's time to come back.

9. After-Hours Care:

We have a dentist on call, so if you need anything, just check with the front desk. If you require a personal prescription refill, we're here to help!

10. Personal Medications: Don't forget to bring your medications in their original containers for safety. It's also a good idea to have a copy of your prescriptions handy in case you need a replacement. There are plenty of pharmacies throughout the city, and pharmacists are very knowledgeable if you have questions.

11. Payment:

As a good faith gesture, a payment of 50% of your current visit is required prior to the commencement of any dental work.

The remainder is due at the end of your dental visit for services rendered thus far. This process is repeated at each visit.

If you're paying by debit card or credit card, please make sure your bank is aware of your transaction.

Paying cash may qualify for a 3% discount (credit card fee) or flight credit! (cash means cash)

If you have any questions about your invoice, our front desk can assist, or you can reach out to our management team either Tom or Alex.

12. Travel Documents:

Keep your travel documents secure! If possible, bring digital copies of a CT scan rather than physical films.

13. Travel information for Budapest City:

46:

QUESTION:

What is an Apicoectomy?

ANSWER

We refer to this as a resection (incision into the side of gum to drain an infection in a root) associated stitches and medical package will also apply in any costing provided to a Patient.

Please also note that resections are not always possible or recommended.

The bump on the side of the gum-line is a sign of a periapical infection.

The Clinic can't determine remotely if the tooth is possible to save or not.

(REFER TO NEXT PICTURE FOR FURTHER INFORMATION)

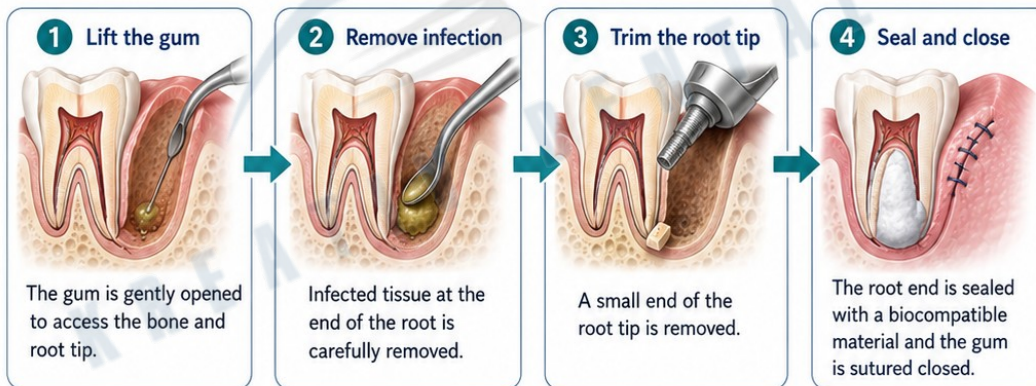

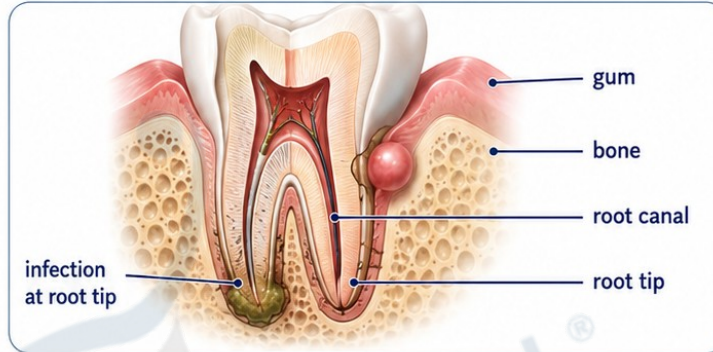

USA

What Is an Apicoectomy?

Also called a root-end resection

An apicoectomy is a minor surgical procedure that removes infection at the end of a tooth's root to help save the tooth.

It is performed when infection remains after a root canal and cannot be treated by retreatment alone.

? Why it may be needed

- Persistent infection after a root canal
- A bump or abscess near the tooth
- Inflammation at the root tip
- To help save the tooth

i Important to know

- Not every tooth is suitable
- The dentist decides after examination and X-rays
- It is used to try to save a tooth when possible

At Kreativ Dental this procedure may also be called a resection.

Educational overview only. Final treatment recommendations are confirmed by the treating dentist.

47:

QUESTION

Patient wants to split his treatment?

ANSWER **Split Treatment Explained**

Split treatment means that a patient's dental treatment is completed in stages rather than all in one visit.

This is very common with dental tourism, especially when the treatment involves extractions, implants, bone healing, sinus lifts, bone grafting, or full-mouth reconstruction. Some dental procedures require the mouth, gums, and bone to heal before the next stage can safely begin.

Kreativ Dental's priority is always to provide the most predictable long-term result, not simply the fastest treatment.

Why Treatment May Need to Be Split

Treatment may need to be split because:

- An extraction site may need time to heal before an implant can be placed.
- A dental implant needs time to integrate with the jawbone before a crown or bridge can be fitted.
- Bone grafting or sinus lift treatment may require a healing period.
- Complex crown, bridge, or full-mouth restoration work may require careful planning and laboratory time.
- The dentist may need to assess how the mouth responds before completing the final stage.

Any treatment plan provided before the patient arrives in Budapest is theoretical. The final decision about timing can only be made after the dentist has examined the patient in person and reviewed the necessary X-rays or CBCT scan.

Common Split Treatment Options

Option 1: Return Home Between Treatment Stages

The patient comes to Budapest for the first stage of treatment. This may include consultation, X-rays, CBCT scan, extractions, implant placement, temporary work, or other treatment recommended by the dentist.

The patient then returns home for the required healing period. Once healing is complete, the patient returns to Budapest for the next stage, such as implant crowns, bridges, or final restoration.

This is often the most practical option for patients who cannot remain in Europe for an extended period.

Option 2: Stay in Europe and Return to the Clinic

In some cases, the patient may need a short waiting period between appointments or treatment stages.

If appropriate, the patient may choose to stay in Budapest, relax, and enjoy the city, or travel around Europe for a week and then return to the clinic for the next stage of treatment.

This option can turn the dental journey into a more enjoyable travel experience while still allowing the clinic the time needed to complete the treatment safely and properly.

The dental team will advise the patient exactly when they need to return to the clinic, so travel plans can be arranged around the treatment schedule.

Important Agent Reminder

Agents should never promise that treatment can be completed in one visit or guarantee that a patient will be suitable for a split treatment schedule.

The dentist will confirm the final treatment plan, timing, and number of visits after the in-person consultation in Budapest.

Patients doing the split option for final stage have to be booked in for both visitations.

(You need to inform us if your patient wishes to do this otherwise half of their appointments won't be set!)

48:

QUESTION

What is the difference between the implant brands, is one of them better than the other?

ANSWER

All of our implant brands are titanium dental implants. Nobel and Strauman are European made brands while Cowellmedi is South Korean.

Our previous standard system was also South Korean (DIO) and we placed close to 100,000 of them in the 10 or so years they were used.

Cowellmedi has been used for about a year with a near perfect success rate. (2025)

The only advantage of using Nobel or Straumann for US patients is that local dentists will be able and more willing to work with these two brands as they are used in the states too.

Cowellmedi is not as known, but with that being said currently anything can be ordered quickly.

In our opinion, with Strauman and Nobel you are mainly paying 2x much for the brand.

The material is the same, healing time, success rate is the same.

(REFER TO PICTURE ON NEXT PAGE FOR FURTHER INFORMATION)

Implant Brand Comparison

Understanding the practical differences

1  straumann   Origin European-made  Material Titanium  Practical note for U.S. patients Widely recognized in the U.S.; local U.S. dentists are more likely to be familiar with it.  Value / pricing impression Premium brand pricing	2  Nobel Biocare™   Origin European-made  Material Titanium  Practical note for U.S. patients Widely recognized in the U.S.; local U.S. dentists are more likely to be familiar with it.  Value / pricing impression Premium brand pricing	3 COWELLMEDI®   Origin South Korean  Material Titanium  Practical note for U.S. patients Less well known in the U.S., but parts/components can still be ordered quickly.  Value / pricing impression Generally a better-value option
--	---	--

What stays the same

- ✓ Titanium material
- ✓ Similar healing time
- ✓ Similar success rate
- ✓ Final choice depends on the dentist's recommendation and the patient's needs

Kreativ Dental experience

- Previous standard system: DIO (South Korea)
- Nearly 100,000 DIO implants placed over about 10 years
- Cowellmedi has been used by the clinic since about 2025 with excellent early results

VALUE NOTE: European premium brands may cost around **2x** more, often due largely to brand recognition and market positioning.

Educational overview only. Final implant selection and treatment planning are confirmed by the treating dentist.

49:

QUESTION

I'm coming all the way from America, and it is going to cost a lot. Can I have a phone call or even better a video call with the Dentist please? I think this would make me feel a lot better if I could ask him some questions.

ANSWER

The Dentist will not talk to a patient prior to their arrival in Budapest.

The Dentist will take as much time as necessary to discuss matters with the patient when the patient is here, but he does not have the time to do online consultations.

(The Dentist is busy being a Dentist and he is also writing treatment plans both for patients attending their consultation but also proposed theoretical plans for prospective patients.)

It is wasteful and unproductive of the Dentist's time to talk to a patient about what may or may not be possible. (This is at best just further speculation)

50:

QUESTION

The treatment plan I got from my Dentist here In New York has a lot of teeth numbers on it, none of them match the numbers on my proposed treatment plan from Kreativ. I don't understand?

ANSWER

There are two primary teeth numbering systems in the world. The U.S. and Europe both use different systems. The explanation is not hard to understand but lengthy

BELOW IS THE CHART WITH BOTH SYSTEMS OVERLAYED YOU NEED TO UNDERSTAND IT AS YOU WILL NEED SOMETIMES TO REFER TO IT. It will be hard for you to read a treatment plan or answer the above question if you don't!

(REFER TO PICTURE ON NEXT PAGE)

KREATIV DENTAL®

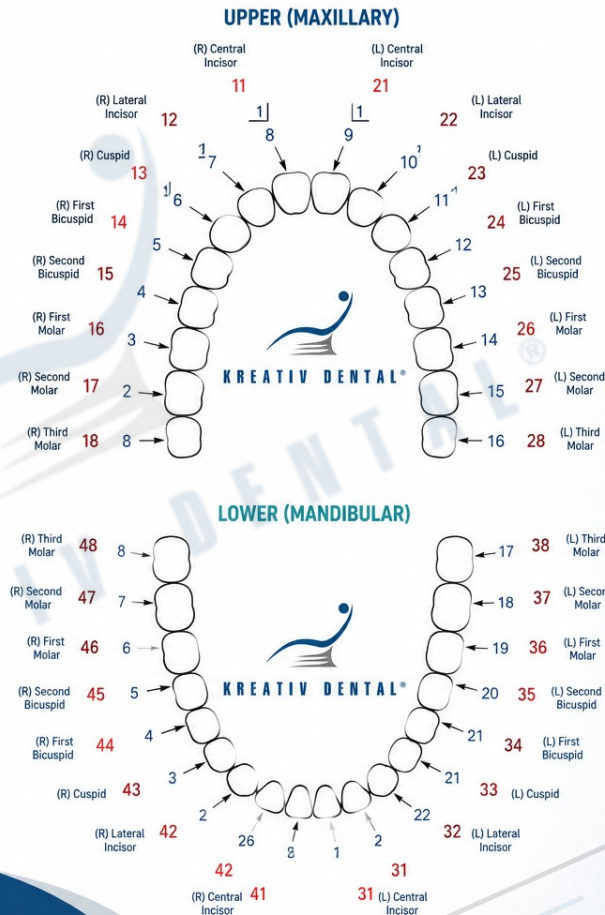

TOOTH NUMBERING CHART

Universal Numbering System
(US Standard)

The universal numbering system is used by dental professionals worldwide to clearly identify each tooth.

- R** RIGHT (PATIENT'S RIGHT)
- L** LEFT (PATIENT'S LEFT)
- FDI** FDI WORLD DENTAL FEDERATION
- DDI** UNIVERSAL NUMBERING

 www.kreativdentalclinic.eu

WHY TOOTH NUMBERING MATTERS

Using a universal system ensures clear communication between dentists, laboratories, and specialists worldwide, helping you receive the best possible care.

GLOBAL STANDARD OF CARE

At Kreativ Dental, we follow international standards to ensure precision, safety, and outstanding results for every patient.

YOUR SMILE, OUR PASSION

We combine advanced technology, expertise, and compassion to create healthy, beautiful smiles that last.

YOUR SMILE. OUR MISSION.
www.kreativdentalclinic.eu

KREATIV DENTAL®

INTERESTING BUT NOT OVERLY HELPFULL INFORMATION

Children have 20 teeth and as a result their own numbering system. Adults have 32 teeth but many of us have lost all or most of our wisdom teeth so often only have 28 teeth!

51:

QUESTION

What do you do if a patient tells you a few days before they leave that they won't need to be collected at the airport because their friend is coming for them.

ANSWER

Tell us so we can cancel the need for the clinic to go to the airport to meet them. The Clinic will need to be able to call them to tell them their appointment time.

YOU need to get contact information from them so this can happen!

52:

PROCESS WE USE TO WRITE A RESPONSE TO AN EMAIL FROM A CLIENT

We copy their e-mail at the top of our response and use it as reference as we work through it answering their concerns and questions. This ensures that we have responded to them fully even if the answer is "I will find out for you and let you know". This also allows you to use some of their phrases and words in your reply and this will assist in building a relationship with your client. Once completed, delete their e-mail prior to sending.

53:

THE FOLLOWING HAS HAPPENED TO US

When you get a couple (Husband and Wife as an example) call or email you and the person that you are communicating with, is not the patient (therefore your correspondence won't be addressed to the patient directly) this is usually as a result of the partner not speaking English or they do not understand computers well. This often means that both people's names end up in emails etc and this can lead to confusion for the clinic and us as to who the patient is. It also results in difficulty finding records. Always make sure in any written material or verbal communications, that you use the patient's name and don't leave space for misinterpretation. Dental Clinics are not natural places for surprises. You need to be clear with us as to who is the patient and who is the assistant, so we don't put incorrect information into the CRM and create issues in Budapest.

54:

INTERNATIONAL DENTAL CERTIFICATIONS:

ISO 9001:2015 Quality Management Certification

- Kreativ Dental has been certified to the ISO 9001:2015 standard for its quality management system.
- The certification covers dental treatment, dental laboratory services, and X-ray diagnostics.
- The certification was issued by **Lloyd's Register for Quality Assurance (LRQA)**, a globally recognized certification body.

International Dental Tourism Accreditations

Treatment Abroad Code of Practice

- Kreativ Dental has been listed as adhering to the Treatment Abroad Code of Practice, an accreditation recognized within the medical and dental tourism industry.

Professional and Regulatory Memberships

The clinic is also associated with several professional organizations and regulatory bodies, including:

- Hungarian Dental Association (MFE)
- Hungarian Academy of Esthetic Dentistry (HAED)
- Hungarian public health licensing authorities (ÁNTSZ/NNK)

Historical Recognition

Kreativ Dental's own materials and independent listings have also referenced:

- UKAS-recognized ISO certification through LRQA
- Treatment Abroad accreditation
- High ratings from international dental tourism review organizations such as WhatClinic.

55:

PATIENT HAS SENT X-RAYS

Dear [Patient Name],

Thank you for sending your X-rays and dental information.

Our dental team will review the information you have provided and give an initial opinion. However, any treatment plan prepared before an in-person consultation is purely provisional and based only on the information available at this time.

To provide an accurate diagnosis, treatment plan, timeline, and cost estimate, a comprehensive clinical examination is required in Budapest. During your consultation, additional diagnostic imaging such as an OPG panoramic X-ray or CT scan may be taken if necessary.

For this reason, it is important to understand that treatment recommendations, procedures, treatment duration, and costs may change following your consultation.

After your consultation and before any obligation, you will be given a treatment plan which will include cost and time commitments. (Your consultation is cost and obligation free)

56:

Dental Passport

A **dental passport** is a simple record that travels with the patient and explains the important details of their dental treatment history.

For Kreativ Dental, a dental passport is especially important when a patient has **dental implants**, because implants are not all the same. Different implant systems have different sizes, shapes, connections, screws, parts, and tools.

A dental passport may include:

Patient details

Name, date of birth, contact details, and treating clinic.

Implant information

The implant brand, type, size, diameter, length, lot/batch number, and the exact tooth position where the implant was placed.

Abutment and crown details

Information about the connector, abutment, screw, crown material, and whether the crown is cemented or screw retained.

Date of treatment

When the implant was placed, when the crown was fitted, and whether healing or osseointegration was completed.

This information matters because when Kreativ Dental is working with a dental patient who already has implants, the clinic needs to know **exactly what is inside the patient's mouth** before planning further treatment.

Without this information, it can be difficult to identify the correct implant system or order the correct parts. This may delay treatment, increase costs, or make it harder to safely repair, restore, or add to existing dental work.

For example, if a patient has an implant crown that is loose, broken, infected, or needs replacing, Kreativ Dental needs to know the implant brand and components so the correct screw, abutment, impression coping, scan body, or replacement crown can be used.

It also helps the dental team avoid unnecessary guesswork. Dentistry should never be based on assumptions, especially with implants. Accurate implant information allows the clinic to plan treatment safely, protect the patient's investment, and reduce the risk of complications.

A clear way to explain this to patients would be:

A dental passport is like a service record for your mouth. If you have dental implants, it tells the dentist exactly what implant system was used, where it was placed, and what parts may be needed in the future. This helps Kreativ Dental plan your treatment accurately, safely, and without unnecessary delays.

57:

Travel power adaptor for Hungary

A **universal international travel adapter** or a **Europe Type C/F adapter with USB and USB-C ports**, rated for **250V**. This lets you charge your phone, laptop, tablet, and small electronics.

A simple packing note for Kreativ Dental patients:

For Budapest, please pack a European Type C/F travel adapter. Most phones and laptops only need the adapter, but U.S. hair dryers and curling irons may need dual voltage or should be left at home.

USA

Why would I need a bone graft

When Is Bone Grafting Necessary?

Bone grafting helps create enough healthy bone to support long-term implant success.

1 Why Bone Grafting May Be Needed

Bone grafting is essential when there is insufficient bone volume to support dental implants.

Tooth loss, trauma, or aging can lead to bone resorption, making implant placement more challenging.

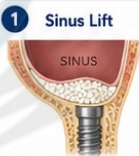

Adequate bone structure is vital for the long-term success of dental implants.

If this treatment is necessary, Kreativ Dental in Budapest provides excellent care at an affordable price.

Types of Bone Grafting

1 Sinus Lift
Also called sinus augmentation. Used when the upper jaw has insufficient bone height, often due to an enlarged sinus cavity. The sinus membrane is gently lifted and bone graft material is placed beneath it. If feasible, implant placement can be done at the same time.

2 Contour Augmentation
Also known as marginal bone thickening. Used for minor bone deficiencies, often around the neck of an implant.

3 Lateral Augmentation
Used when there is insufficient horizontal bone width and broader bone build-up is required.

4 Surgical Protocols
Every procedure is tailored to the patient. Different grafting materials and techniques may be used, and patients receive detailed consultation before treatment.

3 Benefits of Bone Grafting

- ✓ Creates a stable implant foundation.
- ✓ Ensures implants are surrounded by sufficient, high-quality bone.
- ✓ Supports long-term implant stability and success.
- ✓ Can improve support for removable prosthetics, enhancing comfort and confidence.

4 Potential Drawbacks

- ⚠ Bone grafting is a surgical procedure, so it carries risks such as infection or bleeding.
- ⚠ Temporary discomfort and recovery time may be expected, even with minimally invasive techniques.

5 Materials Used in Bone Grafting

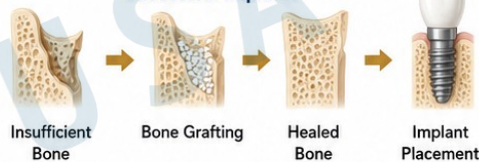

- Recent advancements include calcium sulfate-based grafting materials.
- These materials may be less invasive and can offer improved patient outcomes.
- They often combine hydroxyapatite, tricalcium phosphate, and calcium sulfate.
- Benefits may include reduced surgical trauma, shorter recovery times, and decreased postoperative discomfort compared with traditional GBR methods.

6 Examples of Products

These materials help support bone regeneration and successful implant treatment. Patients should discuss the advantages and risks with their dentist.

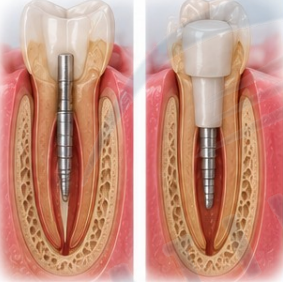

How Bone Grafting Supports Successful Implants

Bone grafting decisions should always be based on a full dental assessment and professional advice.

59. What are: Temporary crown and bridge unit, plastic/acrylic crown or bridge unit, aesthetic shoulder porcelain

 Temporary Crown or Bridge Unit (short term, made chairside) A temporary crown or bridge is made in the clinic on the same day to protect the tooth or implant and restore function and appearance while your final restoration is being prepared. 	 Plastic/Acrylic Crown or Bridge Unit (long term, laboratory made) A durable plastic or acrylic crown or bridge is fabricated in a dental laboratory for long-term use. It is a cost-effective solution for restoring function and aesthetics when high-strength materials are not required. 	 Aesthetic Shoulder Porcelain (3 year guarantee) Aesthetic Shoulder Porcelain crowns provide a natural appearance with a smooth porcelain shoulder that supports healthy gums and delivers excellent strength and beauty.  
 Post/Core A post and core restoration is used to rebuild a severely damaged tooth. The post is placed inside the root canal for retention, and the core rebuilds the tooth structure to support a crown. 	 Fibreglass Post/Core A tooth-colored fibreglass post provides excellent strength and flexibility. It bonds naturally with the tooth structure for a more aesthetic and conservative restoration. 	 Crown/Bridge Removal /unit Safe and careful removal of crowns or bridges is performed to protect the natural tooth structure and prepare for further treatment.

Periodontal Surgical Treatments

Open Curettage and Regenerative Therapy

1 Open Curettage Periodontal Surgery / Quadrant

A gum flap is opened over one quadrant to give the clinician access to the roots. Plaque, calculus, and inflamed tissue are removed to help improve periodontal health.

Procedure Steps

1 Examination

Evaluate gum health and measure pocket depths.

2 Flap Opening

A gum flap is gently lifted to expose the roots and bone.

3 Root Cleaning

Plaque, calculus, and inflamed tissue are removed from root surfaces.

4 Suturing

The flap is repositioned and sutured to promote healing.

2 Open Curettage Periodontal Surgery / Tooth

A localized procedure focused on a single tooth with a deep periodontal pocket or defect. The area around one tooth is opened and cleaned precisely.

Procedure Steps

1 Assessment

Assess pocket depth and bone loss around the specific tooth.

2 Localized Flap

A small flap is opened to access the defect area.

3 Debridement

Thoroughly remove plaque, calculus, and granulation tissue from root surfaces.

4 Closure

Flap is repositioned and sutured for optimal healing.

3 Emdogain (maximum cost / quadrant)

Emdogain is a regenerative material applied after periodontal cleaning to promote natural healing and support the regeneration of lost periodontal tissues.

Benefits

Supports Regeneration

Promotes growth of new bone, cementum, and periodontal ligament.

Helps Reattachment

Supports reattachment of connective tissue for stronger tooth support.

Reduces Pocket Depth

Helps reduce periodontal pocket depths over time.

Supports Healing

Enhances the body's natural healing process for healthier gums.

Why It Matters

Healthier gums
Removes harmful bacteria and supports clean, healthy gum tissue.

Reduced inflammation
Decreases swelling and bleeding for greater comfort.

Improved attachment
Restores support around tooth roots for improved stability.

Long-term periodontal stability
Helps preserve natural teeth and maintain oral health for years to come.

61: What is a Closed Curettage Periodontal Surgery

Closed Curettage Periodontal Surgery

By Dental Hygienist (Per Quadrant)

1. What Is It?

Closed curettage is a deep periodontal cleaning performed below the gumline to remove plaque, calculus, and inflamed tissue from periodontal pockets, helping improve gum health.

2. How It Works

1 Examination & Measuring Pockets

The hygienist examines your gums and measures pocket depths to determine the level of treatment needed.

2 Local Anesthetic (if Needed)

A local anesthetic may be used to keep you comfortable during the procedure.

3 Scaling & Root Planing / Curettage Below Gumline

Special instruments are used to remove plaque, calculus, and inflamed tissue from the pocket and smooth the root surface.

4 Smoothing & Irrigating the Area

The root surface is smoothed to help gums reattach, and the area is rinsed to remove debris and bacteria.

Closed curettage cleans deep below the gumline without making an incision or lifting the gum.

3. Why It Is Needed

- Reduces gum inflammation
- Lowers bacterial buildup
- Helps shrink periodontal pockets
- Supports healing

4. Per Quadrant

Treatment may be done one quadrant at a time, meaning one section of your mouth is treated per visit.

5. Aftercare

Gentle Brushing

Brush gently with a soft-bristled toothbrush.

Warm Saltwater Rinses (if Advised)

Rinse gently with warm salt water as directed to soothe and promote healing.

Soft Foods

Eat soft foods for 24–48 hours or as recommended.

Follow Instructions

Take any prescribed medications and follow all post-op instructions.

Attend Review Appointments

Return for follow-up visits to monitor healing and maintain results.

6. Benefits

Healthier Gums

Cleaner, healthier gums that are less red and swollen.

Fresher Breath

Removing bacteria helps promote fresher breath.

Less Bleeding

Healthier gums are less likely to bleed during brushing.

Long-Term Stability

Supports long-term periodontal health and helps prevent further bone loss.

BEFORE: Periodontal Disease

Plaque and calculus build up below the gumline, causing inflammation and deep pockets.

AFTER: After Closed Curettage

Pocket is cleaned and tissue is smoothed to support healing and improve gum health.

Educational illustration only. Treatment decisions should be made by a qualified dental professional.

62: What are:

Precision Attachments

Long term temporary partial denture

Long term temporary tooth

Denture reline/rebase

Adding tooth to denture

Precision Attachment (3 year guarantee)

Precision attachments provide an effective and discreet solution for removable partial dentures. They ensure excellent stability, retention and comfort.

High Precision Attachment Secure Retention Improved Comfort

Designed for a precise fit and long-term performance.

Restores Function Improves Appearance Comfort & Confidence

Long Term Temporary Partial Denture

A long term temporary partial denture is used while your final treatment is being completed. It restores function, appearance and comfort during the healing or treatment period.

Restores Function Improves Appearance Comfort & Confidence

Long Term Temporary Tooth (without guarantee)

Long term temporary teeth are used as a placeholder during treatment. They help maintain aesthetics and function until your final restoration is ready.

Maintains Aesthetics Protects Adjacent Teeth Temporary Solution

PLEASE NOTE:
Long term temporary teeth are provided without guarantee.

Denture Reline/Rebase

Relining or rebasing improves the fit of your denture for better comfort, function and stability. It helps extend the life of your denture and keeps it fitting like new.

Improved Comfort Better Stability Extends Denture Life

Adding Tooth (to denture)

A new tooth can be added to your existing denture to replace a missing tooth and restore function and appearance.

Restores Function Natural Appearance Cost-Effective Solution

63: What is a Sinus Closing

Sinus Closing

Oroantral Closure Procedure

1 What Is It?

Sinus closing is used when an opening develops between the upper jaw and the maxillary sinus, usually after extraction of an upper back tooth.

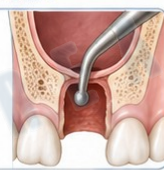

Maxillary sinus
Sinus membrane
Bone
Tooth socket

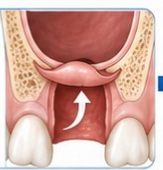

2 Why It Is Needed

-  Prevents food and fluid entering the sinus
-  Supports healing
-  Reduces infection risk

3 How It Works

- 

1 The area is examined and cleaned.
- 

2 The opening is identified between the socket and sinus.
- 

3 A gum flap is repositioned to cover the opening.
- 

4 The site is sutured to allow healing.

4 Aftercare

-  Avoid blowing your nose
-  Sneeze with your mouth open
-  Follow medication instructions
-  Eat soft foods
-  Attend review appointments

5 Why It Matters

-  Protects the sinus
-  Improves comfort
-  Supports successful healing

 Educational illustration only. Treatment decisions should be made by a qualified dental professional.

 KREATIV DENTAL

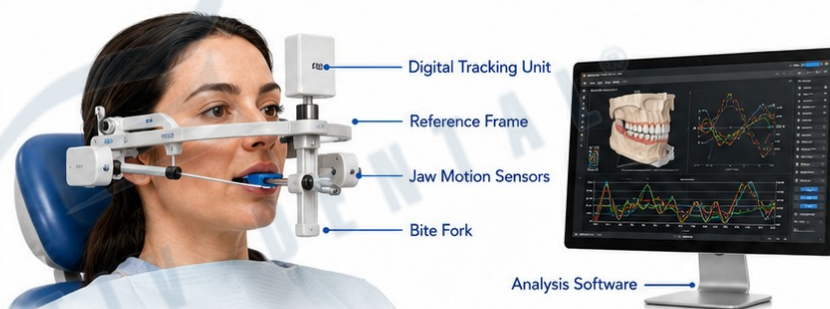

Arcus Digma II

3D Digital Bite Registration

ARCUS Digma II is a 3-D Bite Registration System used for full-mouth restorations, bite correction, and precise occlusal analysis.

1 What Is It?

ARCUS Digma II digitally records jaw movement and bite relationships, helping dentists evaluate occlusion and plan treatment more accurately.

Key Purpose

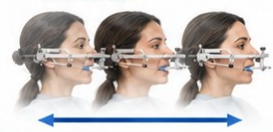

Provides precise digital registration of jaw movement and bite relationships for better diagnosis, treatment planning, and restorative accuracy.

2 How It Works

- 1 A bite fork and tracking device are positioned for measurement.

- 2 The patient performs functional jaw movements while the system records them in 3D.

- 3 The digital data is transferred to software for analysis and articulator programming.

- 4 Restorations and bite corrections can then be planned with greater precision.

3 Why It Matters

Improves bite accuracy

Supports full-mouth rehabilitation

Helps identify occlusal discrepancies

Reduces adjustments

Improves comfort and function

4 Where It Is Used

Full-mouth restorations

Bite correction

TMJ and occlusal analysis

Complex crown and bridge planning

Educational illustration only. Treatment decisions should be made by a qualified dental professional.

KREATIV DENTAL®

65: Face Bow Registration.

Face Bow Registration

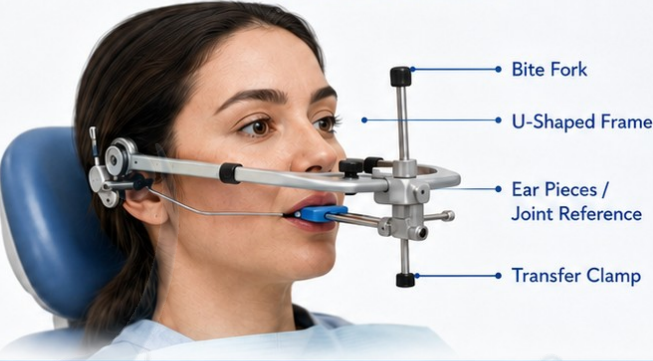

Gnathological Treatment

A technique used to record the position of the upper jaw in relation to the jaw joints, so dental work fits more accurately.

1 What Is It?

Face bow registration records how the upper jaw (maxilla) relates to the temporomandibular joints (TMJ).

Key Purpose

Captures a precise spatial relationship between the maxilla and the TMJ for more accurate diagnosis, treatment planning, and restorations.

2 How It Works

1

The bite fork is placed against the upper teeth.

2

The face bow records the position of the upper jaw in relation to the jaw joints.

3

This record is transferred to a dental articulator.

4

Crowns, bridges, dentures, or full-mouth restorations can then be designed more precisely.

3 Why It Matters

Improves bite accuracy

Helps jaw alignment

Reduces adjustments

Supports comfortable function

Useful for complex restorative and gnathological treatment

4 Where It Is Used

Full-mouth rehabilitation

Complex crowns and bridges

Implant restorations

Occlusion and bite analysis

Educational illustration only. Treatment decisions should be made by a qualified dental professional.

KREATIV DENTAL®

66: Multi Surface Filling

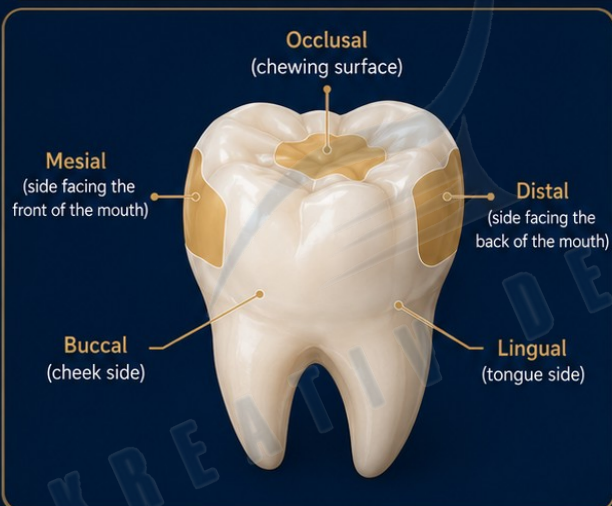

KREATIV DENTAL®

MULTI-SURFACE FILLINGS

— Understanding fillings that repair more than one side of a tooth —

A multi-surface filling repairs a tooth when decay, wear, or a fracture affects more than one surface of the tooth.

FILLING EXAMPLES

1-SURFACE FILLING
repairs one surface only.

2-SURFACE FILLING
repairs two connected surfaces, such as the chewing surface and one side.

3-SURFACE FILLING
repairs three surfaces when a larger area of the tooth is affected.

WHY A LARGER FILLING MAY BE NEEDED

- Decay has spread between tooth surfaces.
- An old filling needs replacement.
- A tooth has chipped or fractured.
- More than one part of the tooth needs support.

MATERIAL COMMONLY USED

Tooth-colored composite filling material is often used for a natural-looking result.

YOUR CONSULTATION MATTERS

The most suitable treatment depends on the size and position of the damaged area and your dentist's in-person assessment.

STRONGER TOGETHER FOR YOUR SMILE

Our goal is to restore the health, function, and beauty of your teeth with lasting, high-quality care.

Kreativ Dental • Budapest

DENTAL FILLINGS

— *Restoring strength, shape, and comfort* —

1. What is a filling?

A filling repairs a tooth damaged by decay, minor cracks, or wear.

2. How it helps

Restores the tooth's shape and function and helps protect it from further damage.

3. Material

Tooth-colored composite fillings are commonly used for a natural-looking result.

4. When you may need one

Sensitivity, a small cavity, a chipped area, or an old filling that needs replacement.

5. Your consultation matters

The most suitable treatment depends on your dentist's in-person assessment.

70: Dental Tax Deduction (America)

IRS TAX DEDUCTIONS FOR ESSENTIAL DENTAL TREATMENT AT KREATIV DENTAL IN BUDAPEST

U.S. patients may be able to deduct essential dental treatment received in Budapest. Here's what you need to know.

 1. ESSENTIAL DENTAL TREATMENT MAY QUALIFY IRS Publication 502 includes dental expenses for the prevention or alleviation of dental disease. ✓ X-rays ✓ Fillings ✓ Extractions ✓ Crowns & Implants ✓ Dentures & Artificial Teeth ✓ Treatment for Gum Disease, Infection & Other Dental Ailments Cosmetic-only procedures (e.g., veneers, teeth whitening) are not deductible.	 2. DEDUCTION LIMITED TO AMOUNT OVER 7.5% OF AGI You must itemize deductions on Schedule A. Medical & dental expenses are deductible only to the extent they exceed 7.5% of your Adjusted Gross Income (AGI). Example: If your AGI is \$80,000, the first \$6,000 (7.5%) of eligible expenses are not deductible. Only the amount above \$6,000 may be deductible.
 3. TRAVEL COSTS MAY BE DEDUCTIBLE The IRS allows transportation costs when travel is primarily for and essential to medical care. Potentially deductible: • Airfare (plane, train, bus) • Taxi, shuttle, ground transportation • Ambulance service (if required)	 4. LODGING MAY BE DEDUCTIBLE (LIMITED) Lodging away from home may be deductible if: • Primarily for and essential to medical care • Provided by a doctor in a licensed hospital or equivalent facility • Not lavish • No significant vacation or recreation element IRS Limit: \$50 per night per person (meals not included)
 5. WHAT IS NOT DEDUCTIBLE ✗ Cosmetic-only dental procedures ✗ Teeth whitening ✗ Expenses reimbursed by insurance or other sources ✗ The portion paid by rebates or discounts (e.g., airfare rebate, free accommodation)	 6. FOREIGN CURRENCY If you pay in Hungarian Forints or Euros, you must report the amount in U.S. dollars. Use the exchange rate on the date of payment and keep a record of the conversion.
 7. KEEP GOOD RECORDS Keep copies of the following for your tax professional: ✓ Treatment plan & final invoice from Kreativ Dental ✓ Proof of payment (with date) ✓ X-rays, diagnosis or explanation of necessity ✓ Airfare receipts ✓ Hotel receipts (even if only part may qualify) ✓ Ground transportation receipts ✓ Records of rebates, discounts or free accommodation ✓ Currency conversion record for payment date	 IMPORTANT Kreativ Dental cannot provide tax advice. Each patient's tax situation is different. Please consult your qualified U.S. tax professional to determine whether your expenses qualify.  KREATIV DENTAL® World-Class Dental Care. Life-Changing Savings.

72: Patient Payments to Clinic

KREATIV DENTAL®

Important payment information for your treatment.

1

As a good faith gesture, a payment of **50%** of your current treatment plan is required prior to the commencement of any dental work. **This payment requirement repeats each visit.**

2

The remainder is due at the end of your dental treatment for services rendered.

3

If you're paying by debit card or credit card, please make sure your bank is aware of your transaction.

4

Paying by cash may qualify for a **discount** or **flight credit!**

5

If you have any questions about your invoice, our front desk can assist, or you can reach out to our management team, either **Tom** or **Alex**.

Thank you for choosing Kreativ Dental.
